<u>Methodology</u>:

Matrix for synthesis of Water Issues in Rio +20 National Reports

Country	Water- relevant Policies/ Strategies/ Plans	Institutional Framework	Integrated Approaches	Water- Energy- Food Nexus	Data & Development Indicators/ Decision- Making Tools	Best Practices/ Initiatives	Priority areas for Capacity Development and Tools
---------	---	----------------------------	--------------------------	------------------------------------	---	-----------------------------------	--

- <u>Information systems</u> to collect and manage data and effectively <u>link them to</u> <u>government planning and decision-making</u>: Development of a system for monitoring, reporting and verification, focusing on water related targets and indicator; Establish nationally agreed indicators, evaluation framework, and contextualised definition for SD; <u>Re-think and re-define appropriate measures</u> of wealth, prosperity, well-being...
- Apparent gap between policies and implementation, largely because of <u>limited</u> <u>implementation capacity</u>. Strengthen institutional coordination; Increase political commitment
- Increase expertise and <u>financial resources</u> to access and <u>implement clean</u> <u>technology</u>
- Enforce pollution control over rivers and wetlands; Control the use of chemical fertilizers to <u>avoid pollution of water resources</u>...
- Integration of water with energy, agriculture....
- Water efficiency
