

**WaterAid is the world's leading international NGO  
dedicated to water, sanitation and hygiene.**

Safe drinking water, basic sanitation and hygiene are central to eradicating extreme poverty in all its forms:

- ✓ key to determinant of health
- ✓ key determinant of hunger
- ✓ key determinant of inequality
- ✓ key determinant of economic productivity

**768 million** still lack access and many more lack services which are safe and sustainable

Sanitation is the most off track MDG target

**2.5 billion** currently without access to sanitation

Reducing inequality and improving sustainability are key future challenges

Looking beyond 2015:

Universal access to water and sanitation is within reach

We have goal, targets, and indicators to achieving the human right to WASH

Targets for post-2015 should include:

- ✓ No one practices open defecation
- ✓ Everyone has safe water, sanitation and hygiene
- ✓ All schools and health centers have water, sanitation and hygiene
- ✓ Water, sanitation and hygiene are sustainable and inequalities have been progressively eliminated

For the full details of the draft technical proposals see JMP website [www.wssinfo.org](http://www.wssinfo.org)

WaterAid's report [Everyone, Everywhere](#) sets more ambitious new target for achieving universal access to WASH by 2030
