

Energy Efficiency Indicators: Fundamentals on Statistics

Roberta Quadrelli Head - Energy Balances, Prices, Emissions, Efficiency Energy Data Centre

Capacity Development for Mainstreaming Energy Sustainable Development Goals (SDGs), Targets and Indicators into Statistical Programmes in Selected Latin American Countries Panama, February 2015

The key role of energy efficiency: global and regional perspectives

Energy efficiency: a huge potential

Figure ES.2 The "first fuel": avoided energy use from energy efficiency in 11 IEA member countries

Notes: TFC = total final consumption. The 11 countries are Australia, Denmark, Finland, France, Germany, Italy, Japan, the Netherlands, Sweden, the United Kingdom and the United States, those for which sufficient data is available to undertake analysis. "Other" includes biofuels plus heat from geothermal, solar, co-generation and district heating. Co-generation refers to the combined production of heat and power.

IEA Energy Efficiency Market Report 2013

...in all regions...

Energy efficiency: a huge-opportunity WORLD going unrealised in emerging and developing OUTLOOK countries

Energy efficiency potential used by sector in non-OECD countries in the New Policies Scenario

Two-thirds of the economic potential to improve energy efficiency remains untapped in the period to 2035

S OECD/IEA 2012

iea

..and with multiple benefits

The multiple benefits of energy efficiency improvements

Note: This list is not exhaustive, but represents some of the most prominent benefits of energy efficiency identified to date. Source: Unless otherwise noted, all material in figures and tables in this chapter derives from IEA data and analysis.

Key point

A multiple benefits approach to energy efficiency reveals a broad range of potential positive impacts.

Figure ES.2

Energy efficiency policies for Latin America and the Caribbean: the IEA perspective

Adapting the 25 Energy Efficiency Policy Recommendations to regional and cultural contexts:

- Latin America and the Caribbean based on discussions held at:
 - Fifth Energy Efficiency Policy Dialogue, Peru (October 2014)
 - Regional Sustainable Energy Training Week for Latin America, Chile (November 2014)
- Arab-Southern and Eastern Mediterranean Region 2014
- Southeast Asia Region 2014

Objective: Support government stakeholders in prioritising and implementing energy efficiency policies

Regional policy recommendations: key messages for Latin America and the Caribbean

Cross-Sectoral

- Designate lead institutions for planning, coordinating, implementing, and monitoring energy efficiency policies and programmes
- Establish regular energy efficiency data collection and indicators
- Remove inefficient energy subsidies
- Stimulate the development of energy efficiency markets
- Develop information and awareness campaigns and educational programmes

Buildings

- Improve energy performance of building components and systems
- Improve building energy performance
- Implement energy labels, certificates or disclosure of energy consumption
- Aim for net-zero energy consumption in buildings

Lighting, Appliances & Equipment

- Implement mandatory Minimum Energy Performance Standards and energy labels for lighting, appliances and equipment, and phase-out least efficient products
- Engage in regional collaboration and harmonisation of standards and testing procedures
- Promote market transformation policies

Regional policy recommendations: key messages for Latin America and the Caribbean

Transport

- Improve transport system planning and efficiency
- Implement mandatory vehicle efficiency standards and labelling
- Promote fuel-efficient non-engine components
- Enhance vehicle operational efficiency

Industry

- Promote energy management and energy efficiency projects
- Promote high-efficiency industrial equipment and systems
- Stimulate the development of energy efficiency services for small and medium enterprises (SMEs)

Report to be published in March 2015 by the IEA

Developing energy efficiency indicators to track efficiency progress: why?

Indicators:

key to set targets and assess policy impacts

iea

Show whether productivity increases for a given energy consumption

Figure 2.7 Decomposition of TFC between 2001 and 2011 for 18 IEA member countries relative to 2001 levels

IEA Energy Efficiency Market Report, 2014

iea

Provide information to forecast energy use across sectors and end uses

Defining energy efficiency indicators

First: what do we mean by energy efficiency?

Are these energy efficiency improvements? (Yes / No / Maybe)

- 1. Consume <u>LESS</u> energy to provide <u>SAME</u> service
 - E.g. substitute Incandescent bulbs with LED

- 2. Consume <u>SAME</u> energy to provide <u>MORE</u> service
 - E.g. increased production with the same energy

What do we mean by energy efficiency?

Are these energy efficiency improvements? (Yes / No / Maybe)

- 3. Consume LESS energy and provide LESS service
 - E.g. walk instead of drive

4. Consume <u>LESS</u> energy because of <u>CHANGE</u> in service

• E.g. economic restructuring

Understanding high-level indicators...

Source: IEA, 2014. TPES (Total Primary Energy supply) /GDP index, based on GDP PPP 2005 USD

What does the energy intensity of the economy tell us?

© OECD/IEA 2015

165

For discussion....

Is TPES/GDP an indicator of energy efficiency?

YesNoMaybe

Understanding more detailed indicators

A pyramidal approach based on data availability

energy balances TFC/Population Aggregated Indicators

How to develop efficiency indicators at a national level?

1. Prioritise across sectors and sub-sectors

Figure 3.1 • Breakdown of total final consumption by sector for two hypothetical countries

Figure 3.2 • Breakdown of industry and transport energy consumption by sub-sector for two hypothetical countries

IEA Energy Efficiency Indicators: Fundamentals on Statistics, 2014

iea

For discussion

What is the largest energy-consuming sector in the world?

Residential
Transport
Industry

Global final consumption by sector

Figure 3.3 • Shares of sectors in total final consumption for the world (1973 and 2011)

* Oher includs agriculture/forestry, fishing, non-specified. Note: unless otherwise indicated, all tables and figures in this chapter derive from IEA data and analysis.

2. Understand how energy is used across sectors

The need to map energy/activity data available at the end-use level

3. Identify preferred indicators based on feasibility and relevance

iea

...

Lighting

Cooking

4. Identify energy and activity data needed

Table 1 • Summary list of the most common indicators for households

Indicator	Coverage	Energy data	Activity data		
Lighting consumption per dwelling	Overall	Total lighting consumption	Total number of dwellings		
Lighting consumption per floor area	Overall	Total lighting consumption	Total floor area		
	Overall	Total cooking consumption	Total number of dwellings		
Cooking consumption per household	By energy source	Cooking consumption on energy source X	Number of dwellings on energy source X		
Appliances consumption per	Overall	Total appliance: concumption			
aweiling	oreidii	roidi appliances consumption	l of all number of dwellings		
Appliances consumption per dwelling with electricity	Overall	Total appliances consumption	Total number of dwellings Total number of dwellings with electricity		

•••

Appliances

Data collection practices described online

A supplement to the publication Energy Efficiency Indicators: Fundamentals on Statistics μ , this database presents practices on collection of data for developing efficiency ir from a variety of OECD and non-OECD countries.

Practices are searchable by country, sector, methodology and type of available documentation. By sharing these experiences, we hope to help countries and organisations to their own energy efficiency indicators programmes.

basic metals	552	642	18	20	30.7	32.4	5%		
machinery	151	182	129	61	1.2	3.0	156%		
transport equipment	78	71	36	33	2.2	2.2	0%		
Other manufacturing	165	186	21	18	7.9	10.3	30%		

Q3. What is the reason for the trend in total intensity?

The importance of disentangling efficiency improvements from structural changes of the economy

Thank you
