

Good Practices, Success Stories and Lessons Learnt in SDG Implementation: An Evidence-based Stock-taking

Element	Possible Content
Title	<ul style="list-style-type: none">• Brief description of the practice, including the SDGs and targets it is linked to.
Geographical Coverage	<ul style="list-style-type: none">• Territorial range over which it is carried out – e.g. administrative, watershed, ecosystem or other, including map and geo-reference.
Introduction	<ul style="list-style-type: none">• Brief description of background context, challenges addressed and timeframe over which practice carried out.• Objective of the practice.• Distinguishing feature(s) making it an effective response to the SDGs/2030 Agenda for Sustainable Development (e.g. integration of environmental, social, economic indicators; design for acceleration of progress or for reaching the furthest behind first; interlinkages among the SDGs and targets; other innovative change in line with the transformative spirit of the 2030 Agenda, etc.).
Key Stakeholders	<ul style="list-style-type: none">• Beneficiaries, implementers, institutions, donors or other partners.• Methods of engagement and participation, including any special contextual features.• Extent to which outcomes/results validated by stakeholders (e.g. stakeholder perspectives and testimony).• Innovative partnerships

Results/Outputs/Impacts

- Evidence-based results and outputs (quantitative and qualitative) arising from the practice – changes in status and trends (e.g. with relation to individuals, families or geographic areas).
- Unanticipated spill-overs – positive and negative, including how negative impacts were alleviated or mitigated.
- Longer-term results to which practice contributes.
- Differential impacts across genders/population groups if any.

Enabling Factors and Constraints

- Enabling conditions that helped the practice to succeed, including but not limited to financing, investment, STI.
- Specific constraints that needed to be overcome and how this was done.
- Innovations that the practice may have brought about, or new ideas/technologies/ways of thinking that it was able to leverage.

Sustainability and Replicability

- Elements that are in place for environmental, social and economic sustainability and resilience.
- Cost/efficiency implications – benefits relative to costs.
- Plans for extending the practice more widely or encouraging its adoption in other contexts.

Conclusions

- Key messages including impact, what made the practice break new ground, and other lessons learned.

Contact Details

- Name, email of resource person familiar with all the details who will be able to answer questions/provide additional information
- Institutional context – NGO, government, academia, private sector, UN system, think-tank etc.

Other Sources of Information

- Related websites, published articles or news stories, audio-video materials, formal assessments, guidance notes or other documents that have drawn upon the practice.
