# Social/sustainability and Intermodal participatory action research collaboration: Chile-India-US

1. Ecologies of modes
2. Intermodality
3. “Social” sustainability

# 1. Ecologies of modes

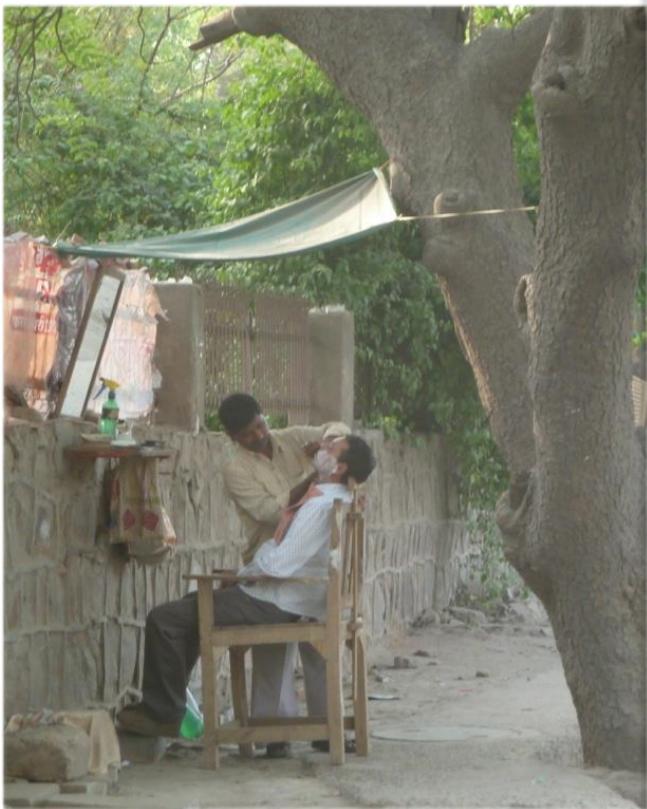

# Look at what's wrong

# And what's RIGHT

# And what's RIGHT

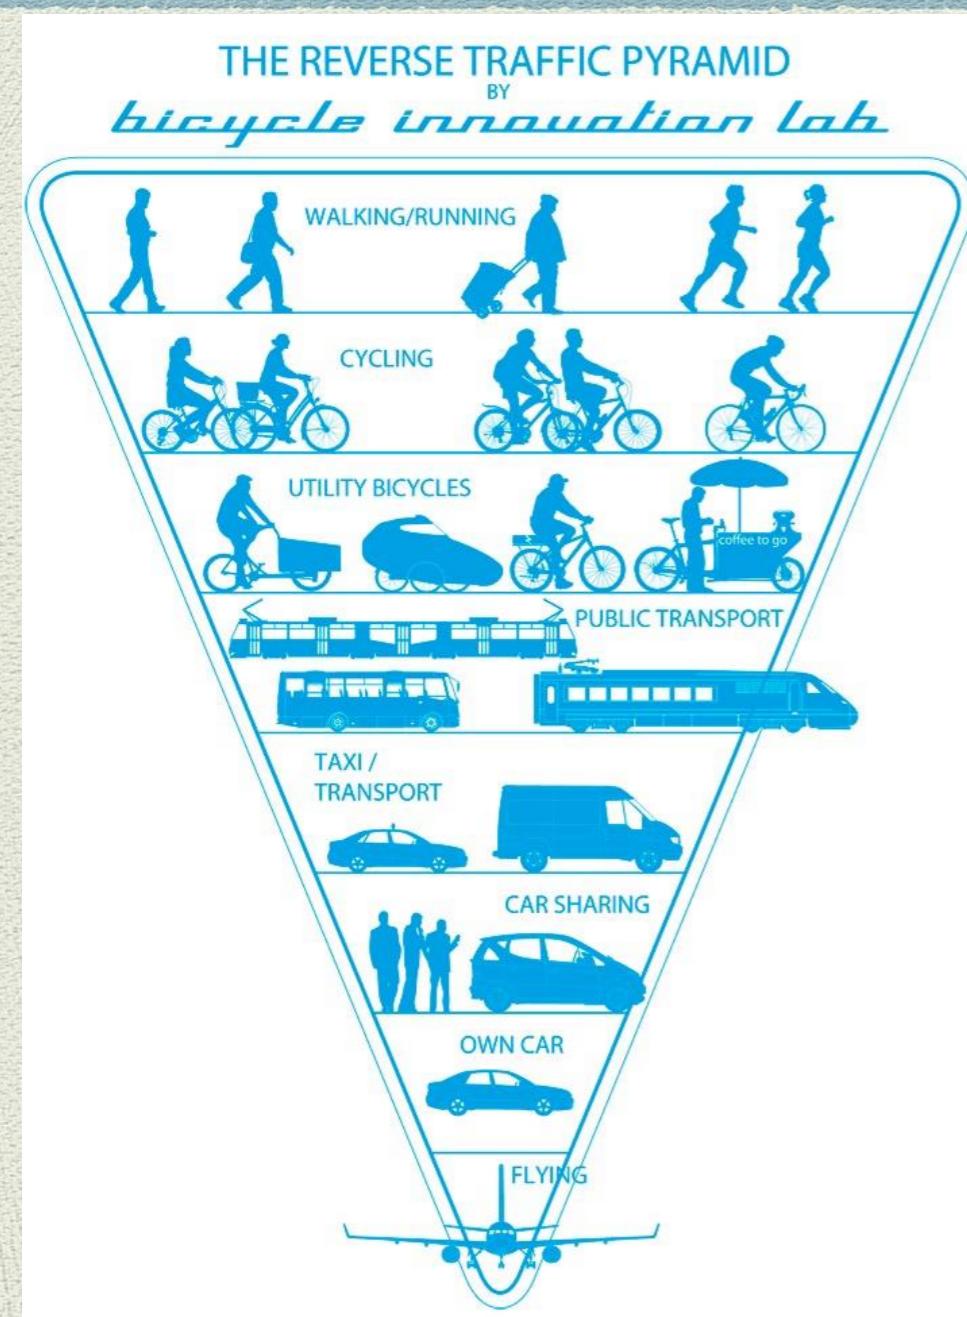

# And what's RIGHT

# Focus on CONNECTIONS between a sustainable ecology of modes

# Reverse pyramid

**More space  
More resources  
More mobile services  
More jobs/businesses  
Car-free lifestyle**

**Less road space  
Fewer resources  
Shift ownership**

# Each transport mode a niche

**Walking (0-2 km) Cycling (2-8 km)**

Short trips and access to public transport

**Public transport (5-15 km).**

Longer distances in places that concentrate origins and destinations.

**Car:**  
Long distance,  
low density

**ORIGINAL CONCEPT:**  
TOM GODEFROOIJ, I-CE.

**+++ more trips+++**

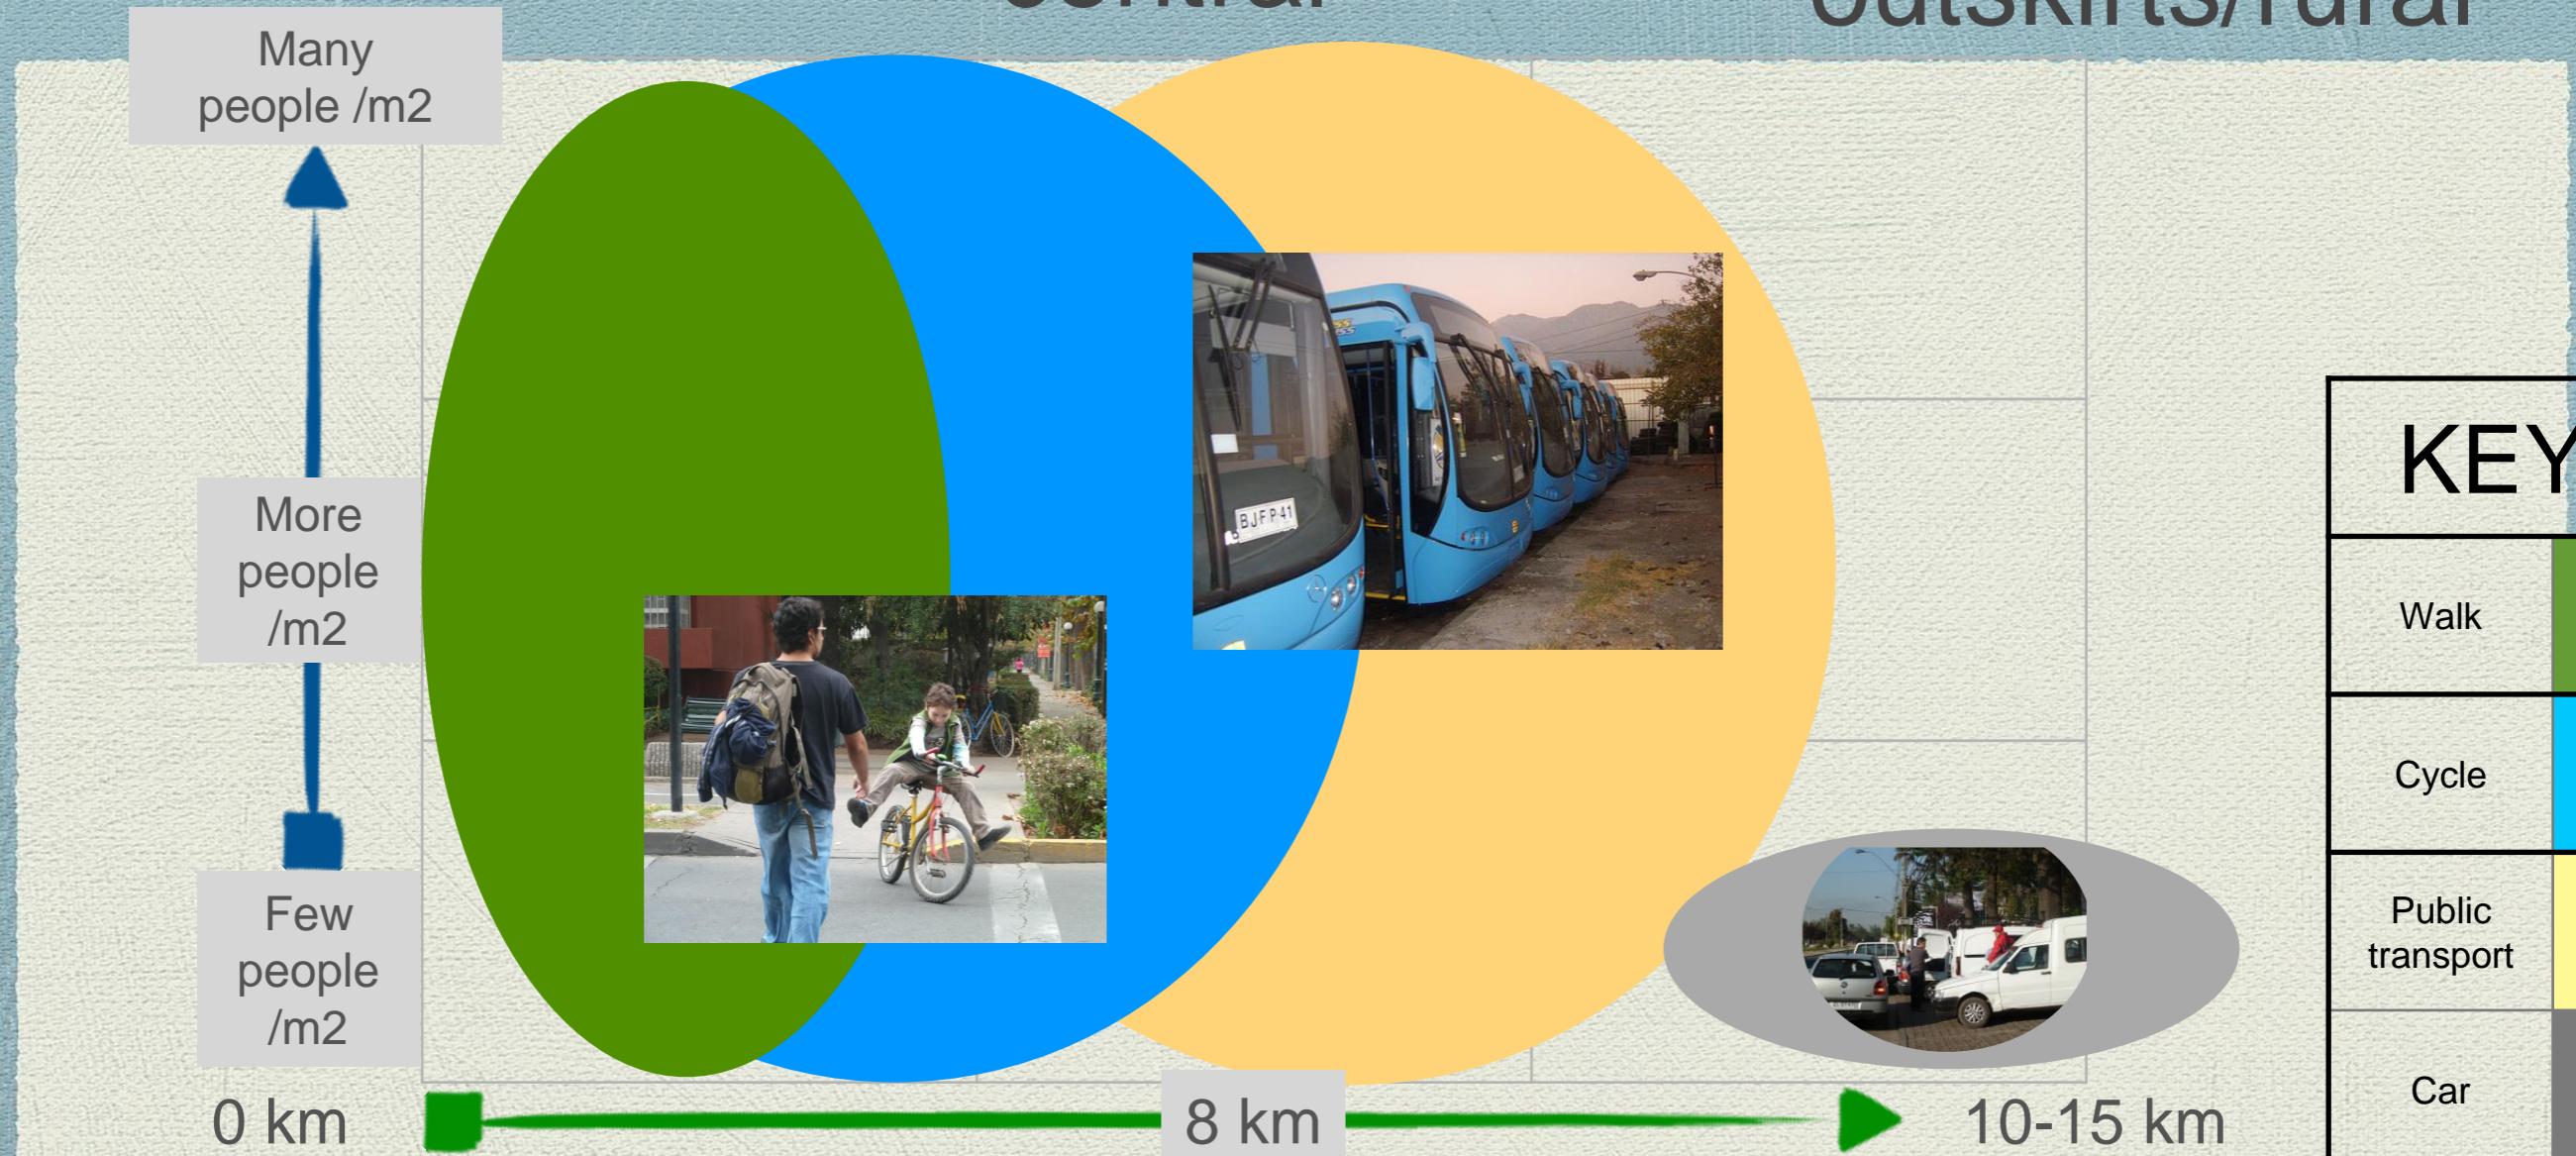

**← - fewer →**

# Re-distribute MODES & ROADS by design, distance and density

central

outskirts/rural

Mid- to high densities

+ short trips (0-10 km), walking and cycling (bicitaxis, bikeshare, tricycles)

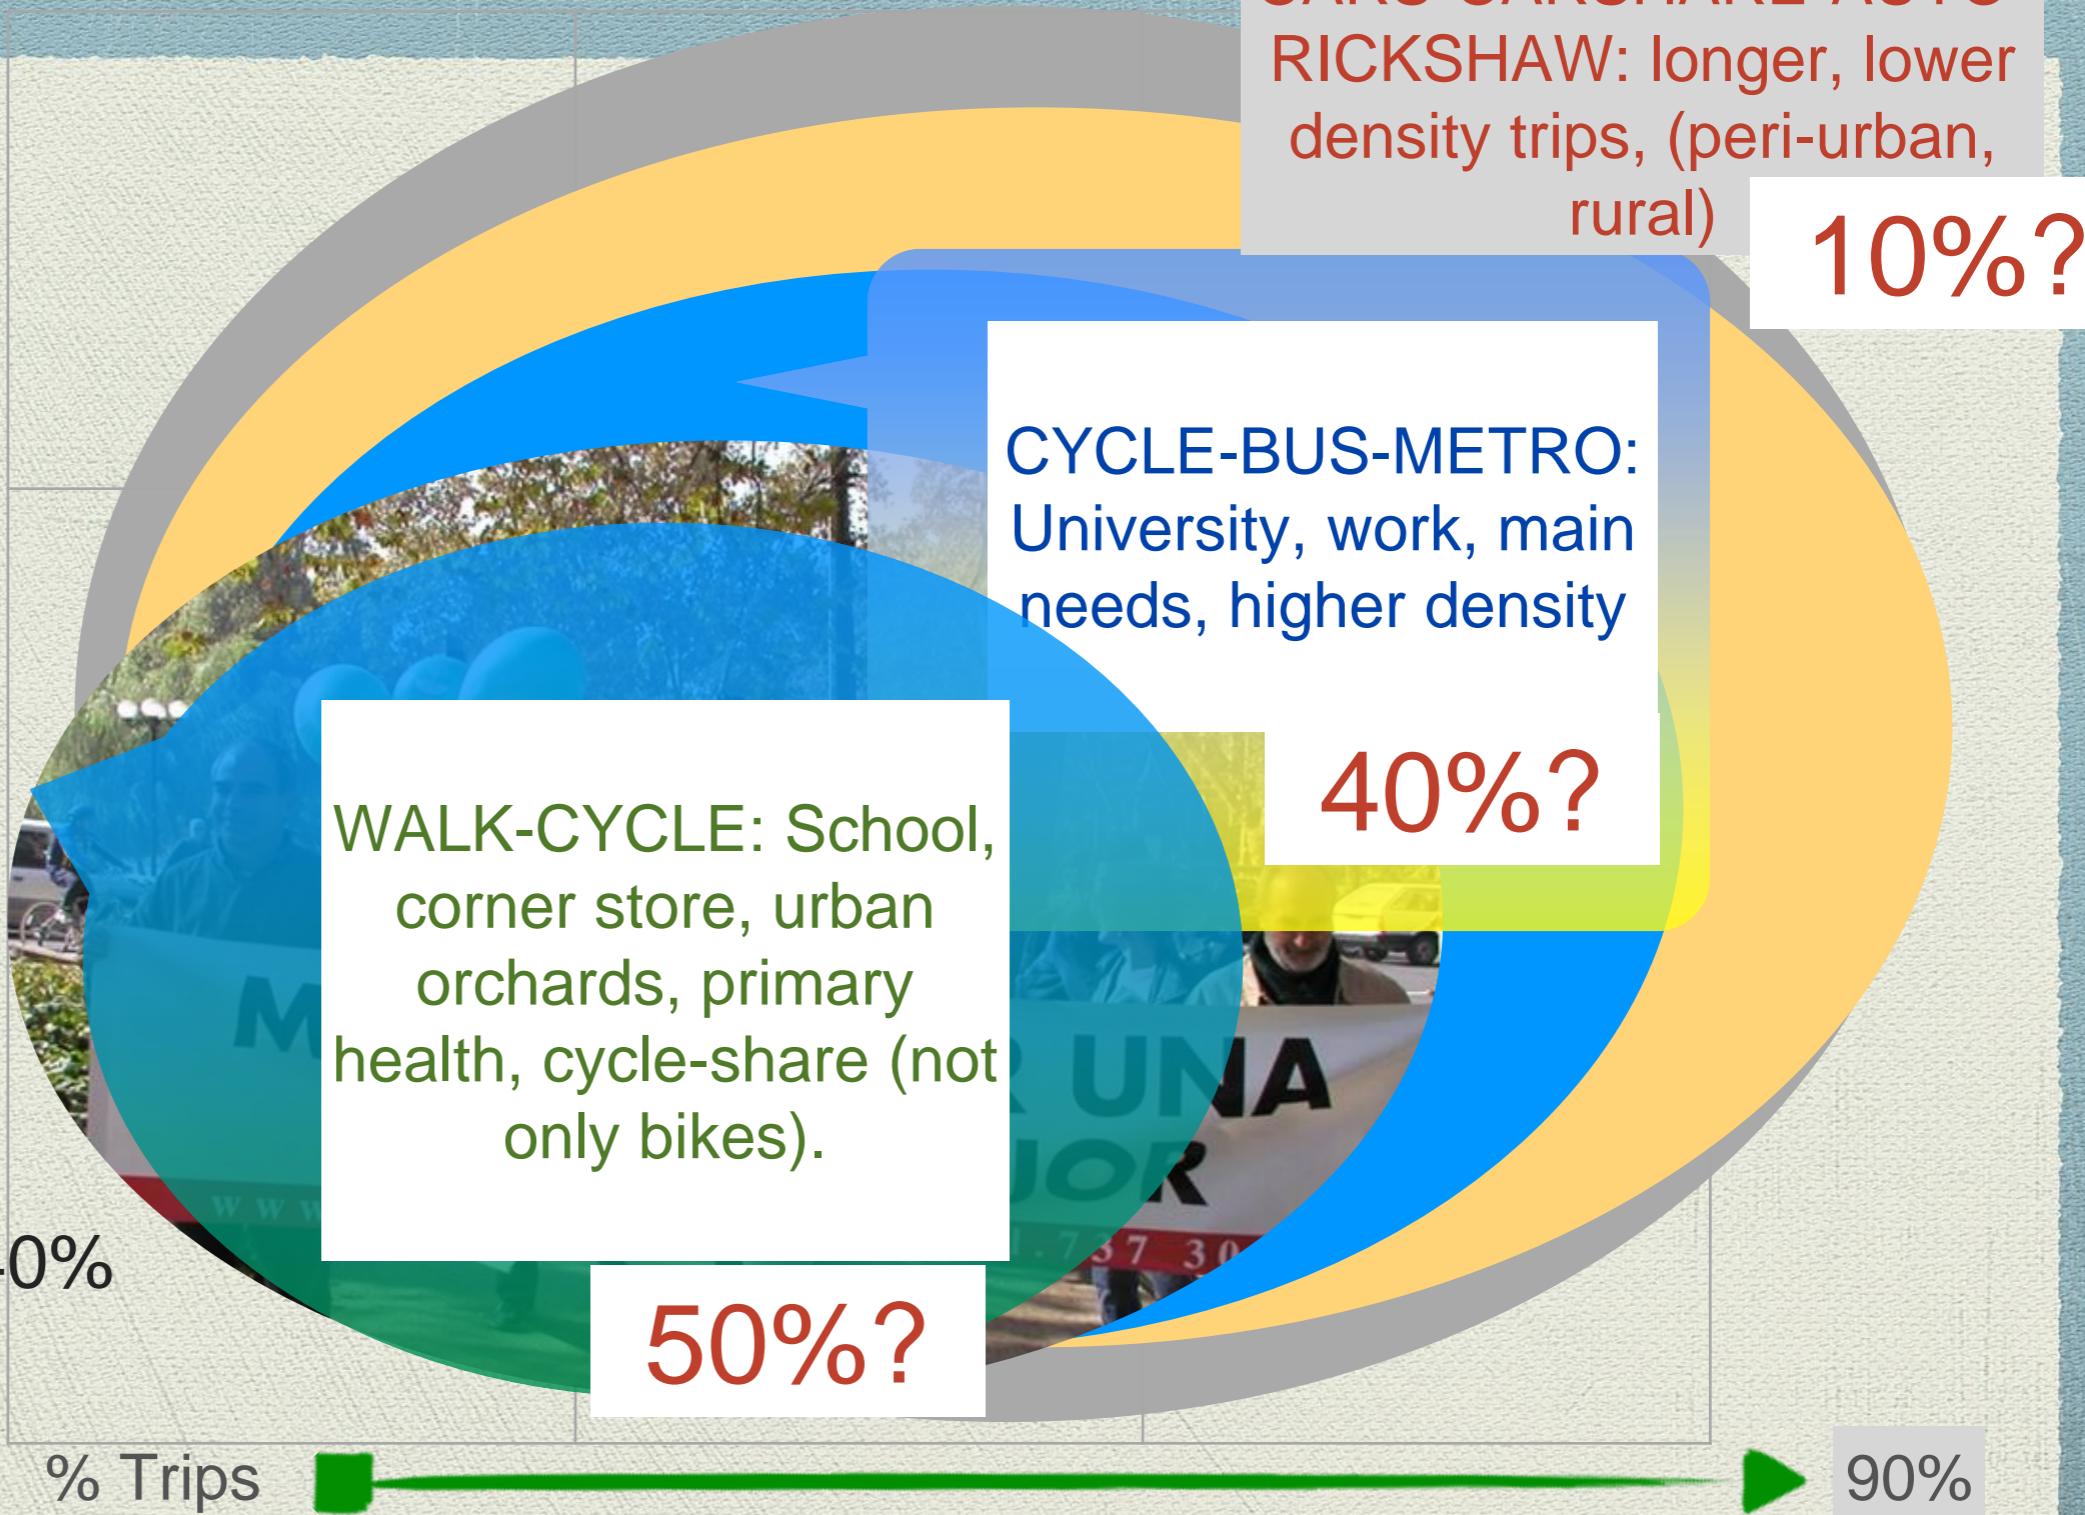

+ Medium trips (5-15 km), BRT-Metro

Low density, long distances, Private car

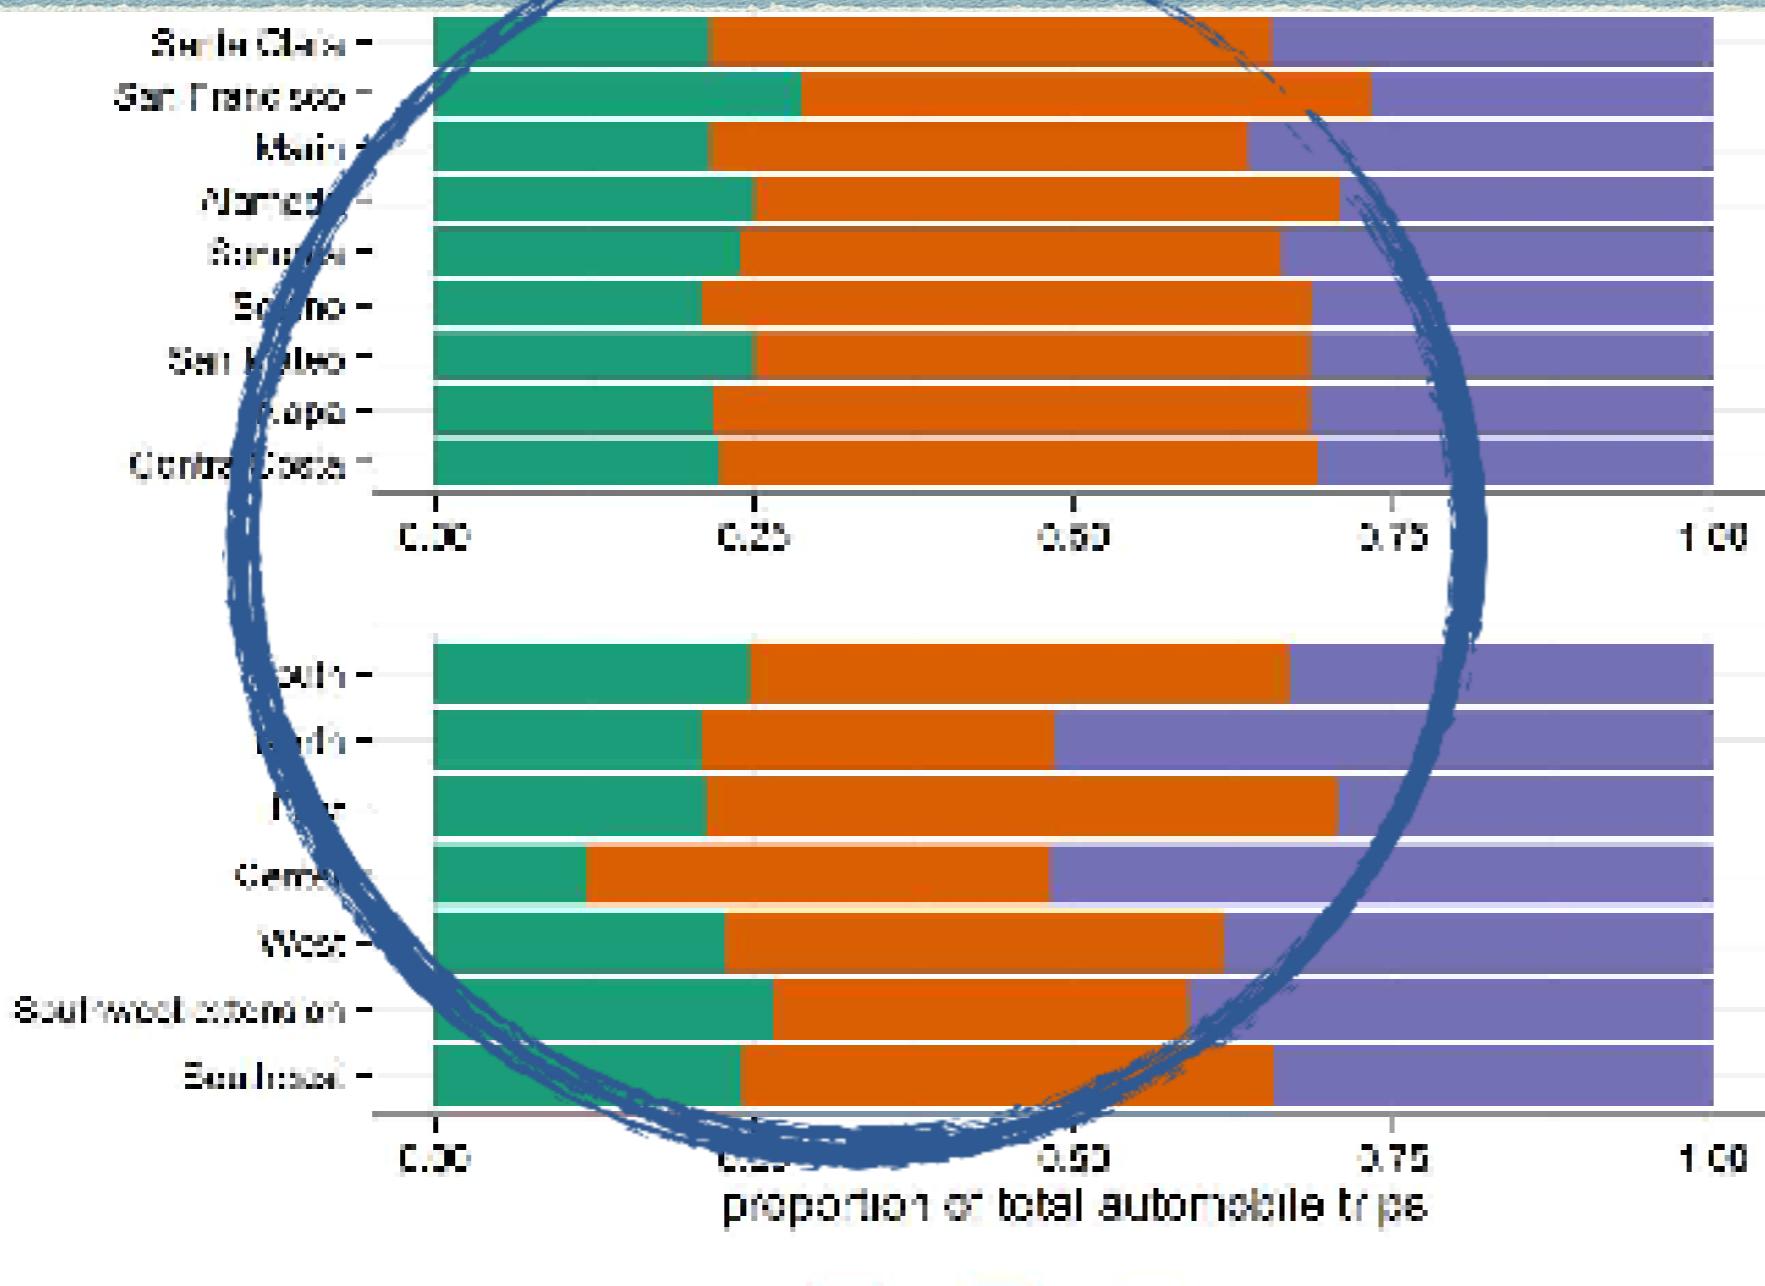

# RE-LOCATE daily services, plan to targets, for modal share, but also road space.

KEY	
Walk	Green
Cycle	Blue
Public transport	Yellow
Car	Grey

ALREADY  
Walk (36%); +  
Cycles (4%) = 40%  
Bus-Metro 25%  
Car 25%

# Potential modal shift targets: % of trips

Well over half and up to 75% of car trips in the Bay area (above) and Metro Santiago (below) more suited to walking and cycling

# Potential for modal shift targets

TABLE 4. Mode shift targets in the San Francisco Bay Area and Santiago de Chile.

Current mode share (%)	Share of trips (%)			Target modal share (2020)	
	< 2 km	2 – 8 km	> 8 km		
<b>San Francisco Bay Area</b>					
Automobile	71.5	23.4	44.8	31.7	12.9
Walking	19.3	96.3	3.7	0.03	37.7
Bike	2.1	47.7	46.8	5.5	36.7
Public transit	6.0	16.0	39.0	44.2	12.9
<b>Santiago Metropolitan Region</b>					
Automobile	25.6	21.6	42.0	36.2	13.3
Walking	34.4	95.8	3.8	0.39	46.6
Bike	4.0	62.8	32.4	4.8	26.7
Public transit	29.4	8.9	39.3	51.7	13.3

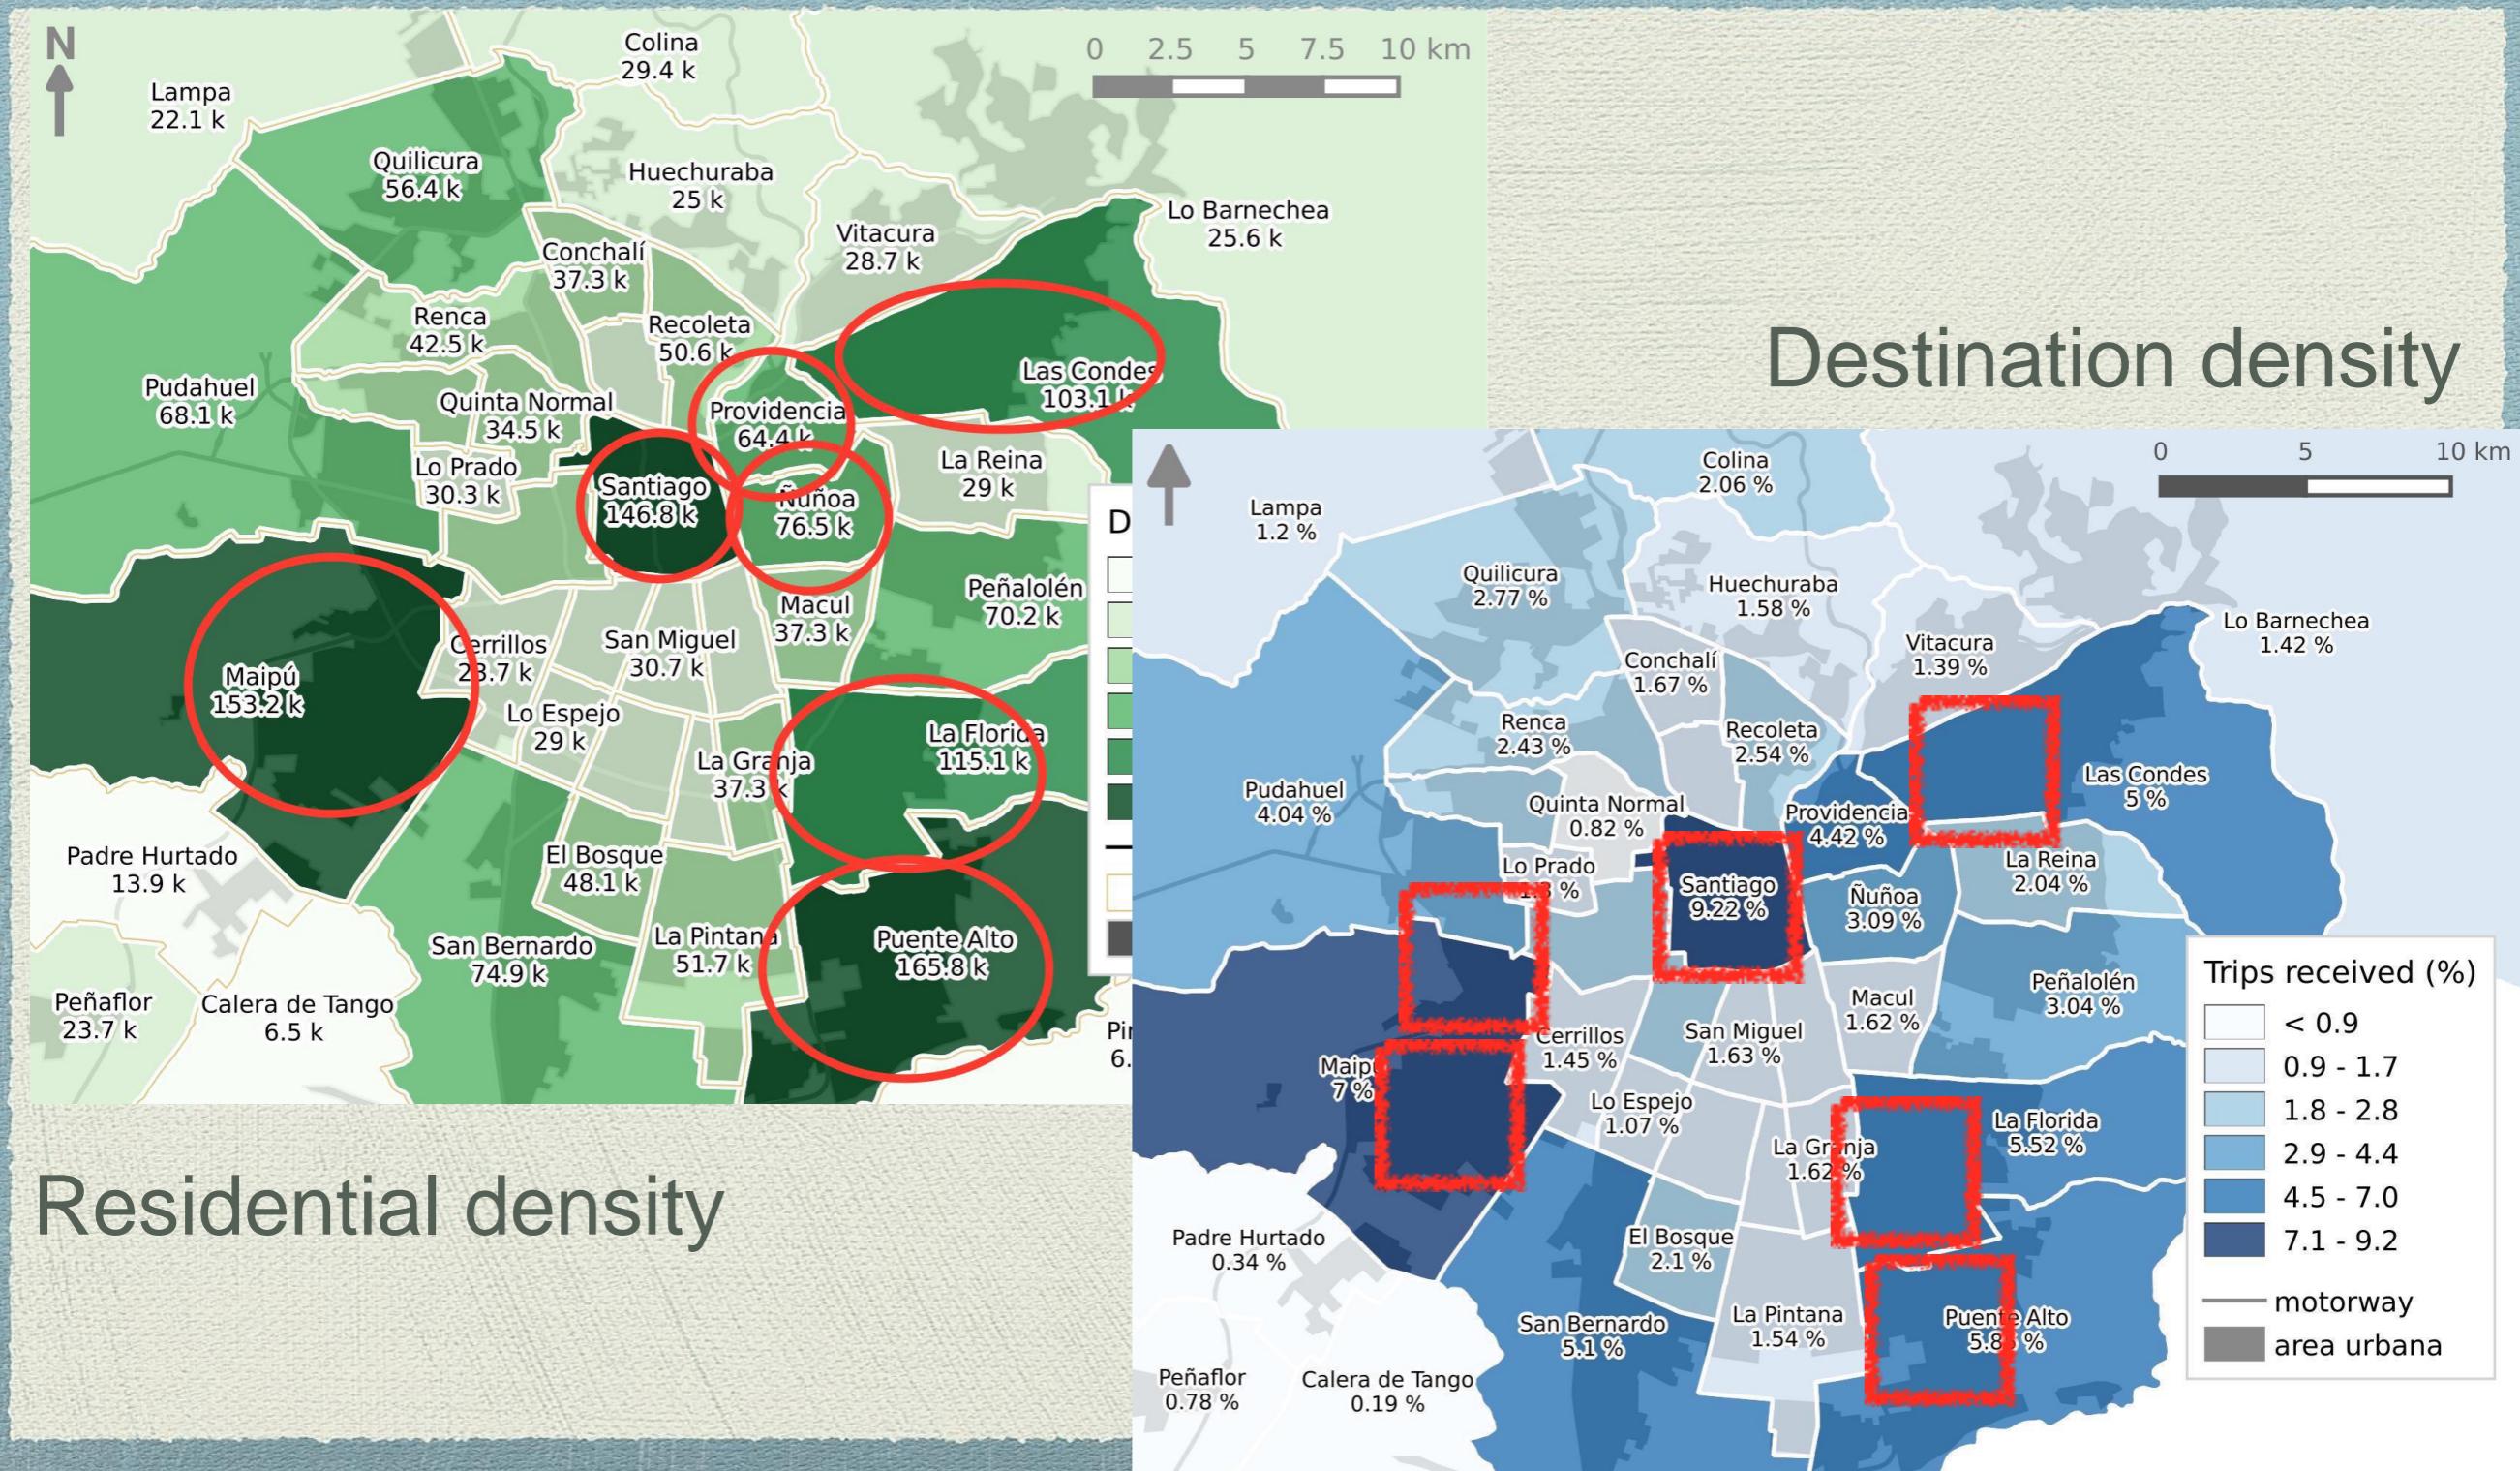

Source: Data from California Department of Transportation (2013) and SECTRA and Universidad Alberto Hurtado (2014). Estimates of potential for modal shift described in text.

# Key lessons for planning

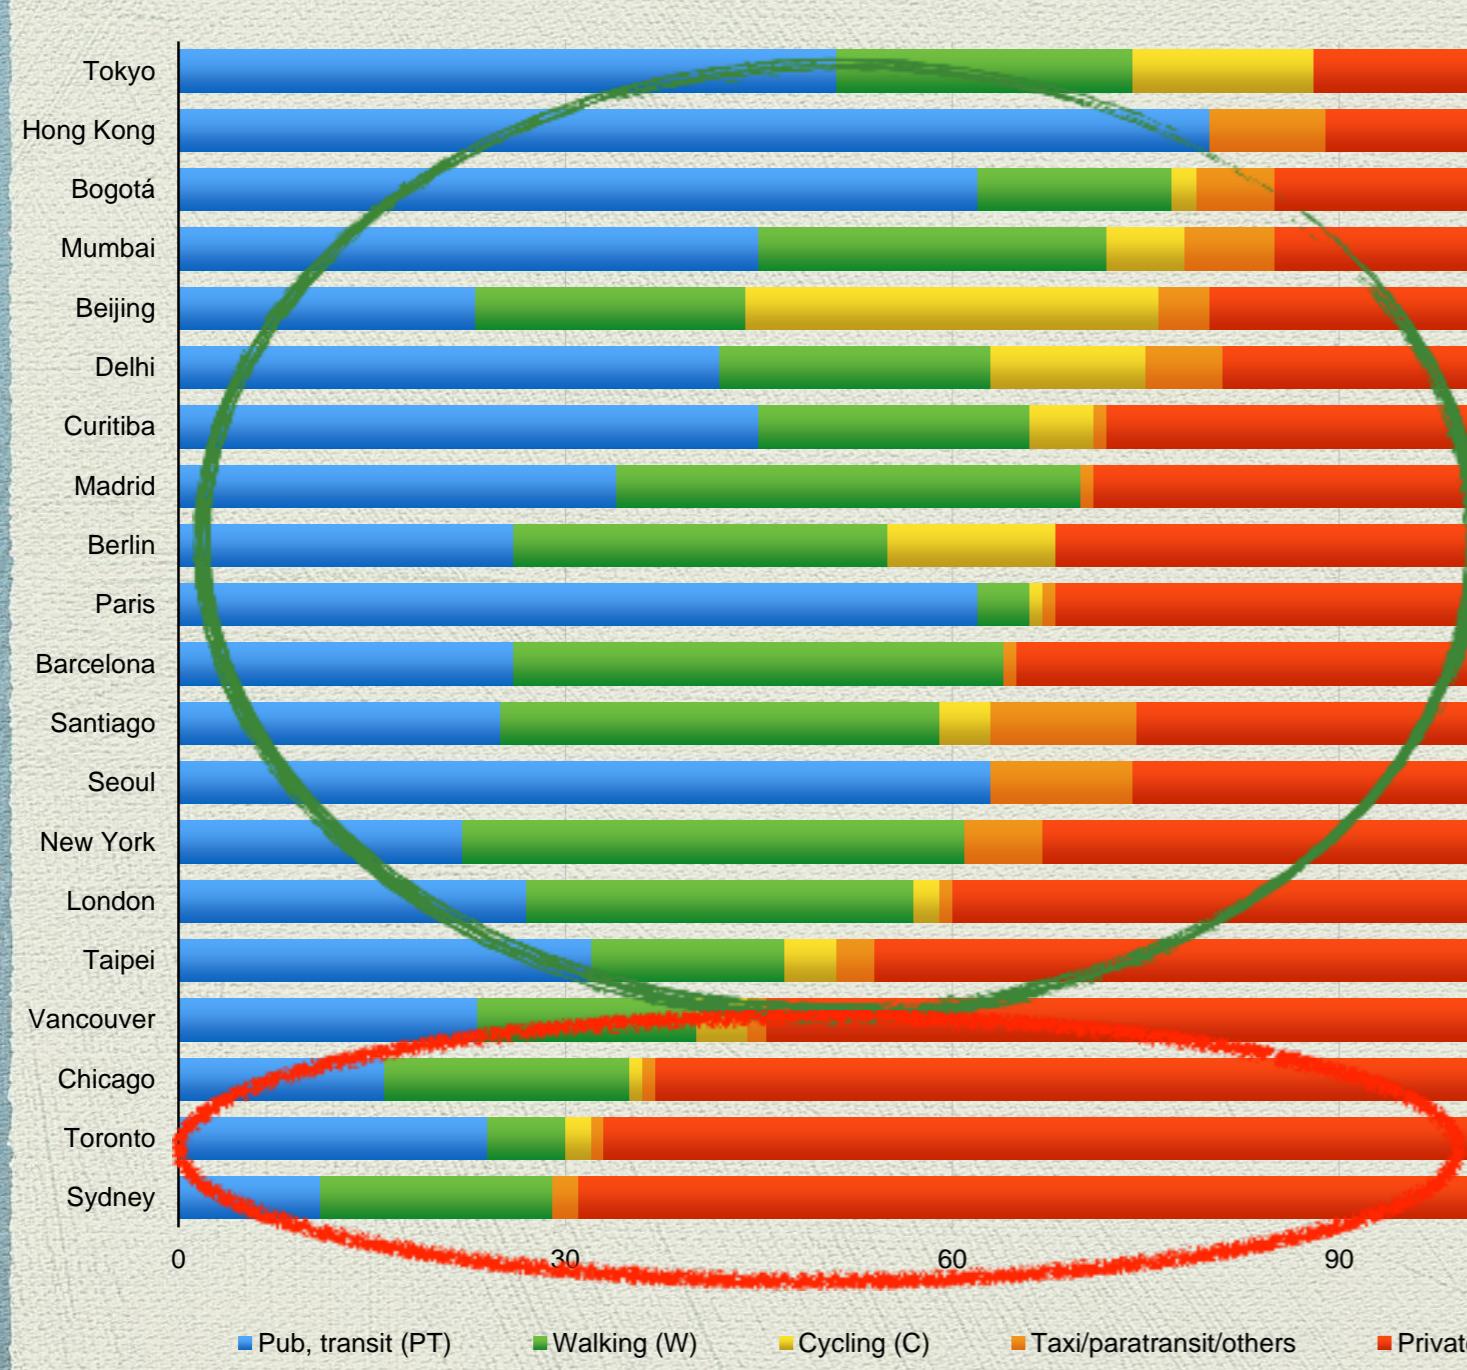

- 1. Non-work travel destinations** — for education, local retail, health, public services — often fall directly under local/regl authorities. They often *involve majority of trips*, particularly by *women and other vulnerable people*.
- 2. Reverse trips (street fairs, local service booths)** should be valued and used more.
- 3. Active-public transport precincts** to maximize health, social, employment benefits.

# Santiago in general

## 2. Intermodality

# Sustainable transport majority

Potentially a powerful alliance

Source: Journeys. November 2011, Singapore Transport and Land Authority Academy, <http://app.lta.gov.sg/ltaacademy/Journeys.htm>, Accessed 24 February 2014. Vancouver figures from City of Vancouver Administrative Report. 30 May 2013. [http://former.vancouver.ca/cyclerk/cclerk/2013\\_0612/documents/cfsc2.pdf](http://former.vancouver.ca/cyclerk/cclerk/2013_0612/documents/cfsc2.pdf), accessed 24-Feb-2014.<sup>120</sup>

# “Intermodality”

- **Multimodality:** The presence of different transport modes, usually with little or no coordination among them.
- **Intermodality:** A focus on the seamless integration of diverse modes, considered socially, environmentally and economically sustainable.

# ECF + World Cycling Alliance

## CYCLING DELIVERS ON THE GLOBAL GOALS

Shifting towards a better economy, society, and planet for all

World  
Cycling  
Alliance

### CYCLING DELIVERS ON THE GLOBAL GOALS

The Global Goals, as stipulated in the preamble of the Sustainable Development Goals (SDGs), seek to realize the human rights of all. Cycling is already delivering on these goals worldwide, and this is a good reason to invest more in cycling. Making transportation more sustainable is of critical importance for humanity and the planet. Moreover, active mobility is a human right on all scales – including the right to cycle. Governments at all levels should provide safe access to public space, protect those that walk and cycle, and ensure – through mobility – equal participation in society. Investment in better conditions for cycling – including e-cycling, cargo cycling and public bicycles – will help achieve these Global Goals as cycling is directly linked to the following 11 Global Goals:

#### Goal #1: End poverty in all its forms everywhere.

Cycling is an affordable and simple mode of transport enabling access to education, jobs, markets, and community activities in both urban and rural areas. The bicycle is often the only affordable technical means of transport for people and goods, and thus helps individuals to lower the cost of transport for their household. Cycling can more than halve commuting time for those otherwise dependent on walking, giving them access to more job opportunities, schools, markets, and communities. In addition, the potential for economic growth through cycling-related job creation is high. Investments in cycling offer good opportunities for sound national, regional and international poverty-reduction strategies.

#### Goal #2: End hunger, achieve food security and improved nutrition and promote sustainable agriculture.

Cycling plays an important role for many small-scale food producers. It can provide secure and equal access to land, resources and inputs, knowledge centers, financial services, markets and opportunities for non-farm employment. Cycling helps to ensure access, in particular for the poor, to food all-year round. By widening the area accessible to people who do not have an alternative mode of transportation, cycling ensures better access to food markets and communities, increasing nutrition options and ensuring the sustainable transportation of food products.

#### Goal #3: Ensure healthy lives and promote well-being for all at all ages.

Cycling generates healthy and non-air-polluting lifestyles. The physical activity cycling generates reduces heart diseases and other negative impacts of sedentary lifestyles. Air quality and road safety improve when individual motorized transport is replaced by cycling. Creating safe conditions for cyclists contributes to reducing the number of global deaths and injuries from road traffic accidents.

#### Goal #5: Achieve gender equality and empower all women and girls.

Cycling provides access for women and girls to water, schools, markets, and jobs that are otherwise inaccessible through available transportation means or walking. Safe infrastructure for cycling supports gender equality as it increases the number of women and girls that take advantage of cycling.

# ADAPTING and transforming “cycleinclusion” (Dutch)

Holanda

Chile

# Cycle-INCLUSION

# Cycle-INCLUSION

# CYCLE-INCLUSION: WORK

# Pradip Kumar: Rickshaw Bank

## Uses of a rickshaw

# Pradip Kumar: Rickshaw Bank

## Old vs. Rickshaw bank

**Changes to rickshaws  
(shown on left):**

- Aero-dynamically designed, thus lighter
- More spacious
- More attractive to clients
- Comfortable for all age groups
- Longer life
- Rickshaw designed by IIT, Guwahati

# Forms of bike-public transport integration

	Main Measures	Examples
	<i>Strong information and promotion / behaviour change, usually combined agency and civil society effort.</i>	
1	Bike parking at train and bus stops	Bogotá, Munich, Amsterdam
2	Bike racks on buses	Mainly North American cities
3	Bikes on rail cars	Common in Europe, off-peak US
4	Bike rentals	The Netherlands, tourism
5	Public bike systems	Netherlands, Germany, Copenhagen
6	Bikesharing, some fare-integration	Paris, Santiago, Sevilla, etc.
7	Bike routes connecting to public transport stations/stops	Netherlands, Germany, Denmark
9	Shared bus-bike-tram lanes	France, Belgium, Germany, UK
10	Cycle Taxis/Rickshaws/Smartphoneapp	India

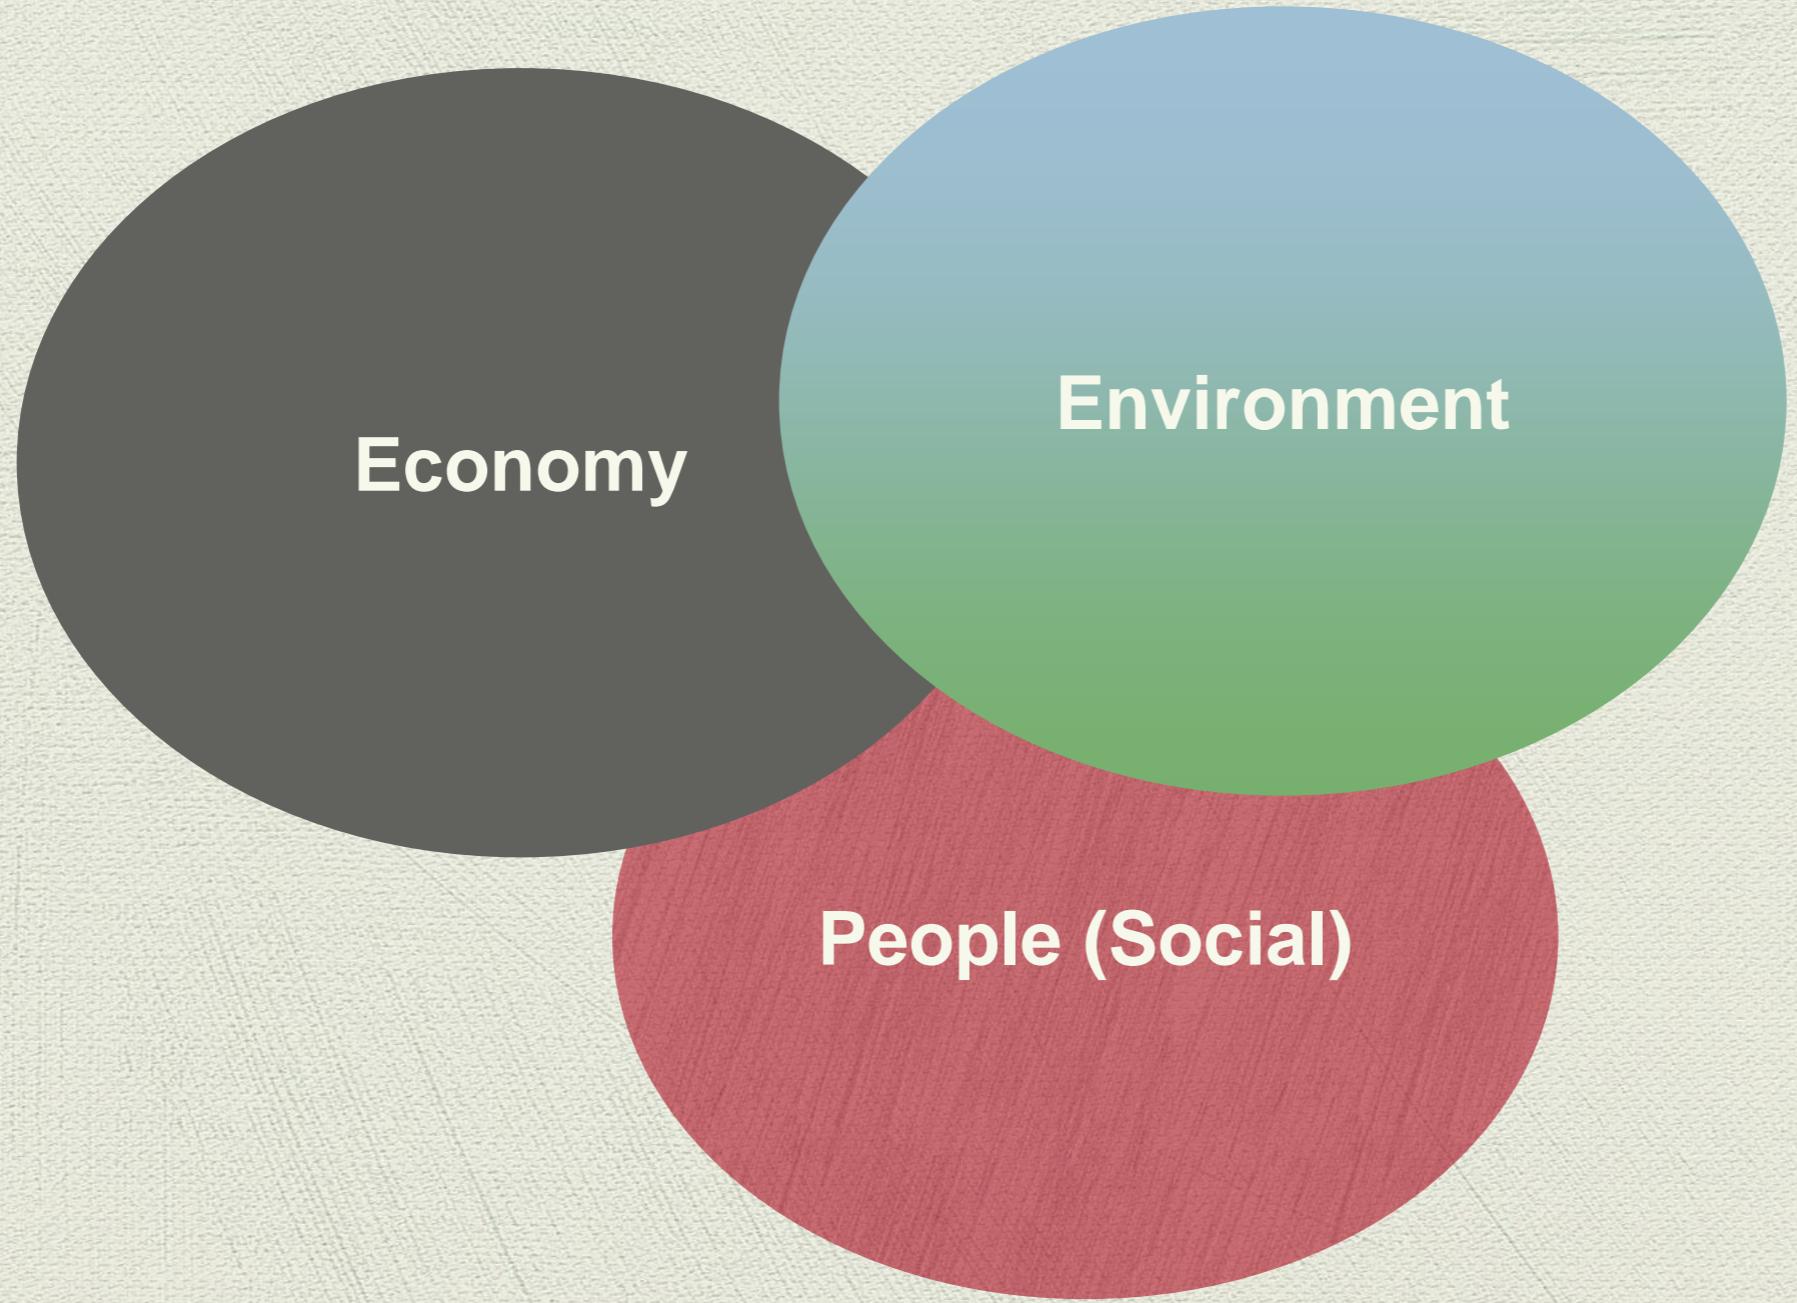

# Key lessons for planning

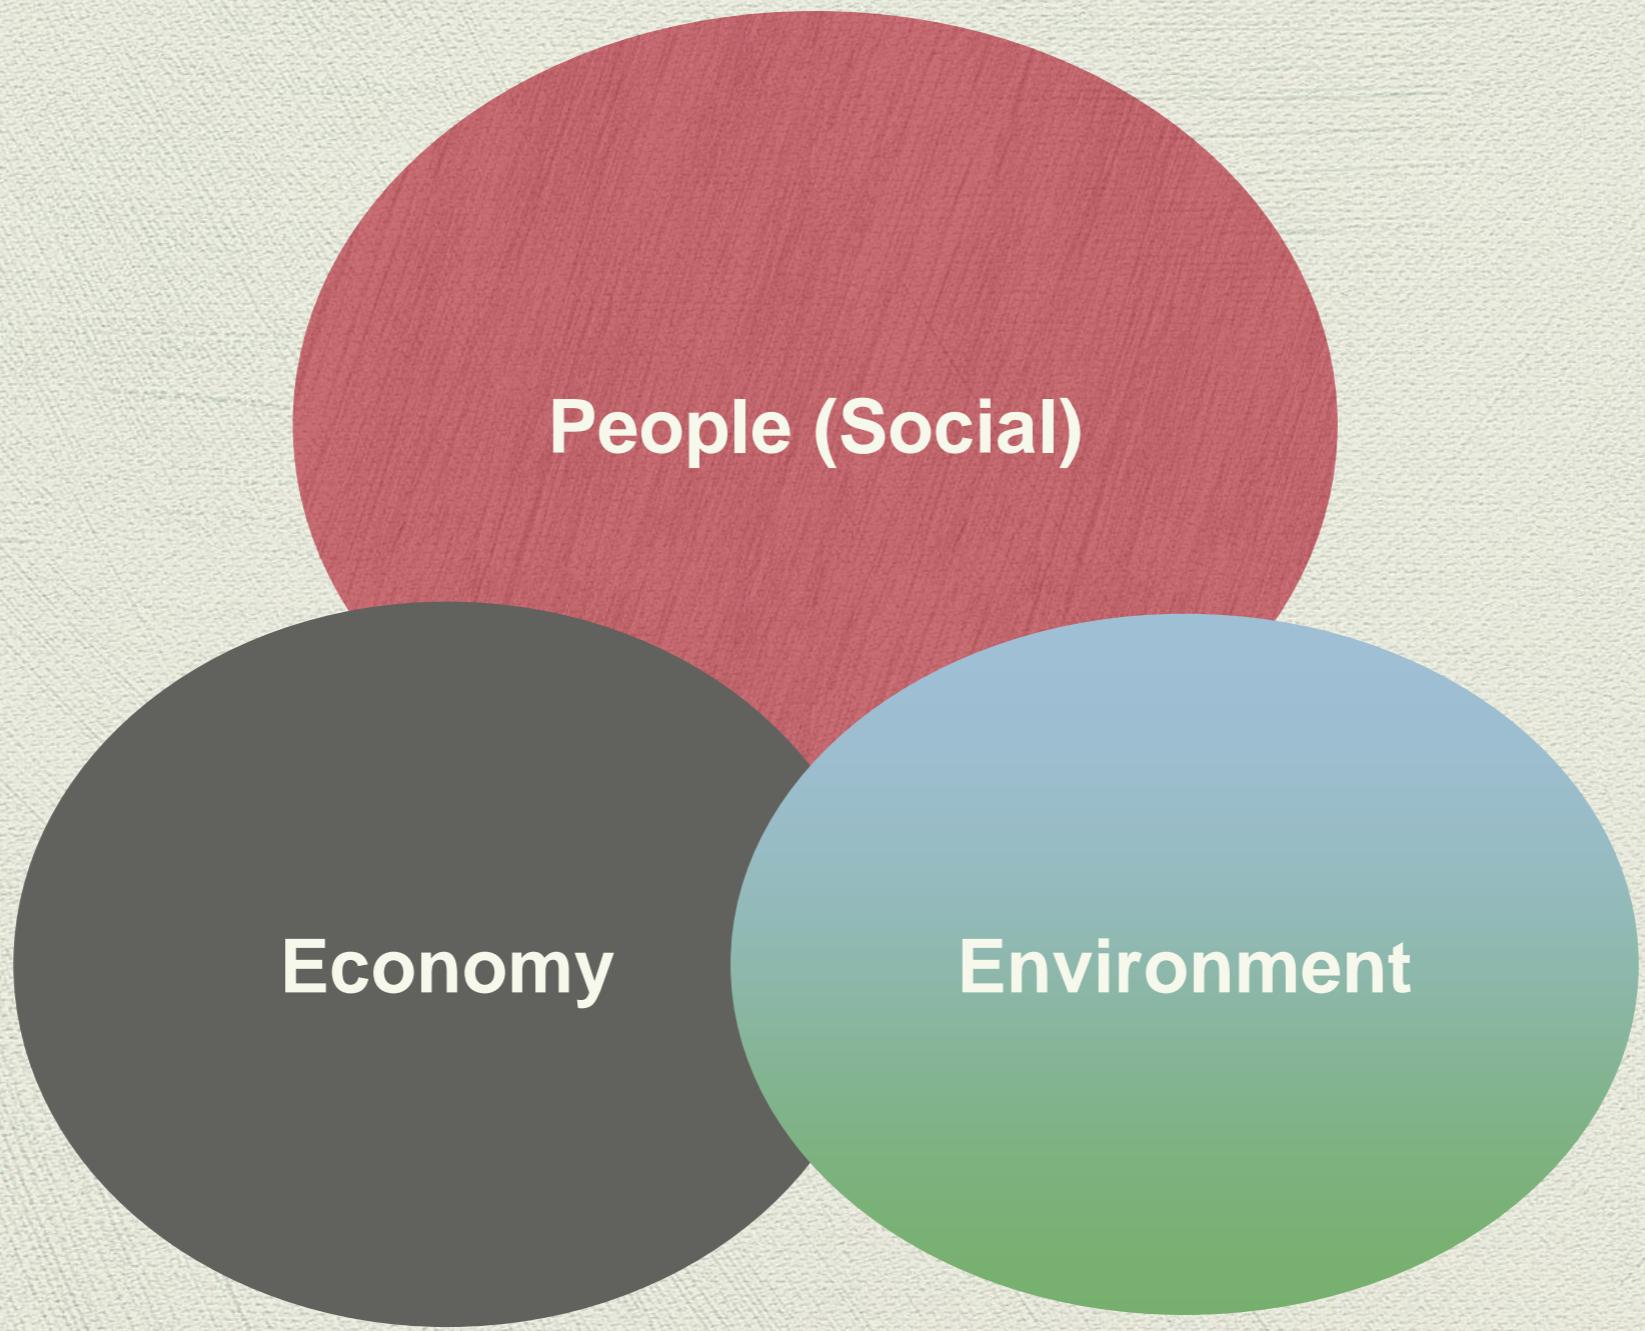

1. **TRICYCLES AND BICYCLES** are key tool for social equity, environmental and economic sustainability
2. **Good for everyone, not just direct users:** Save space on roads, don't pollute, improve individual health and reduce social health costs.
3. **Modal share targets and car-free city precincts** key tools for change.

### 3. Social sustainability: the importance of *agency*

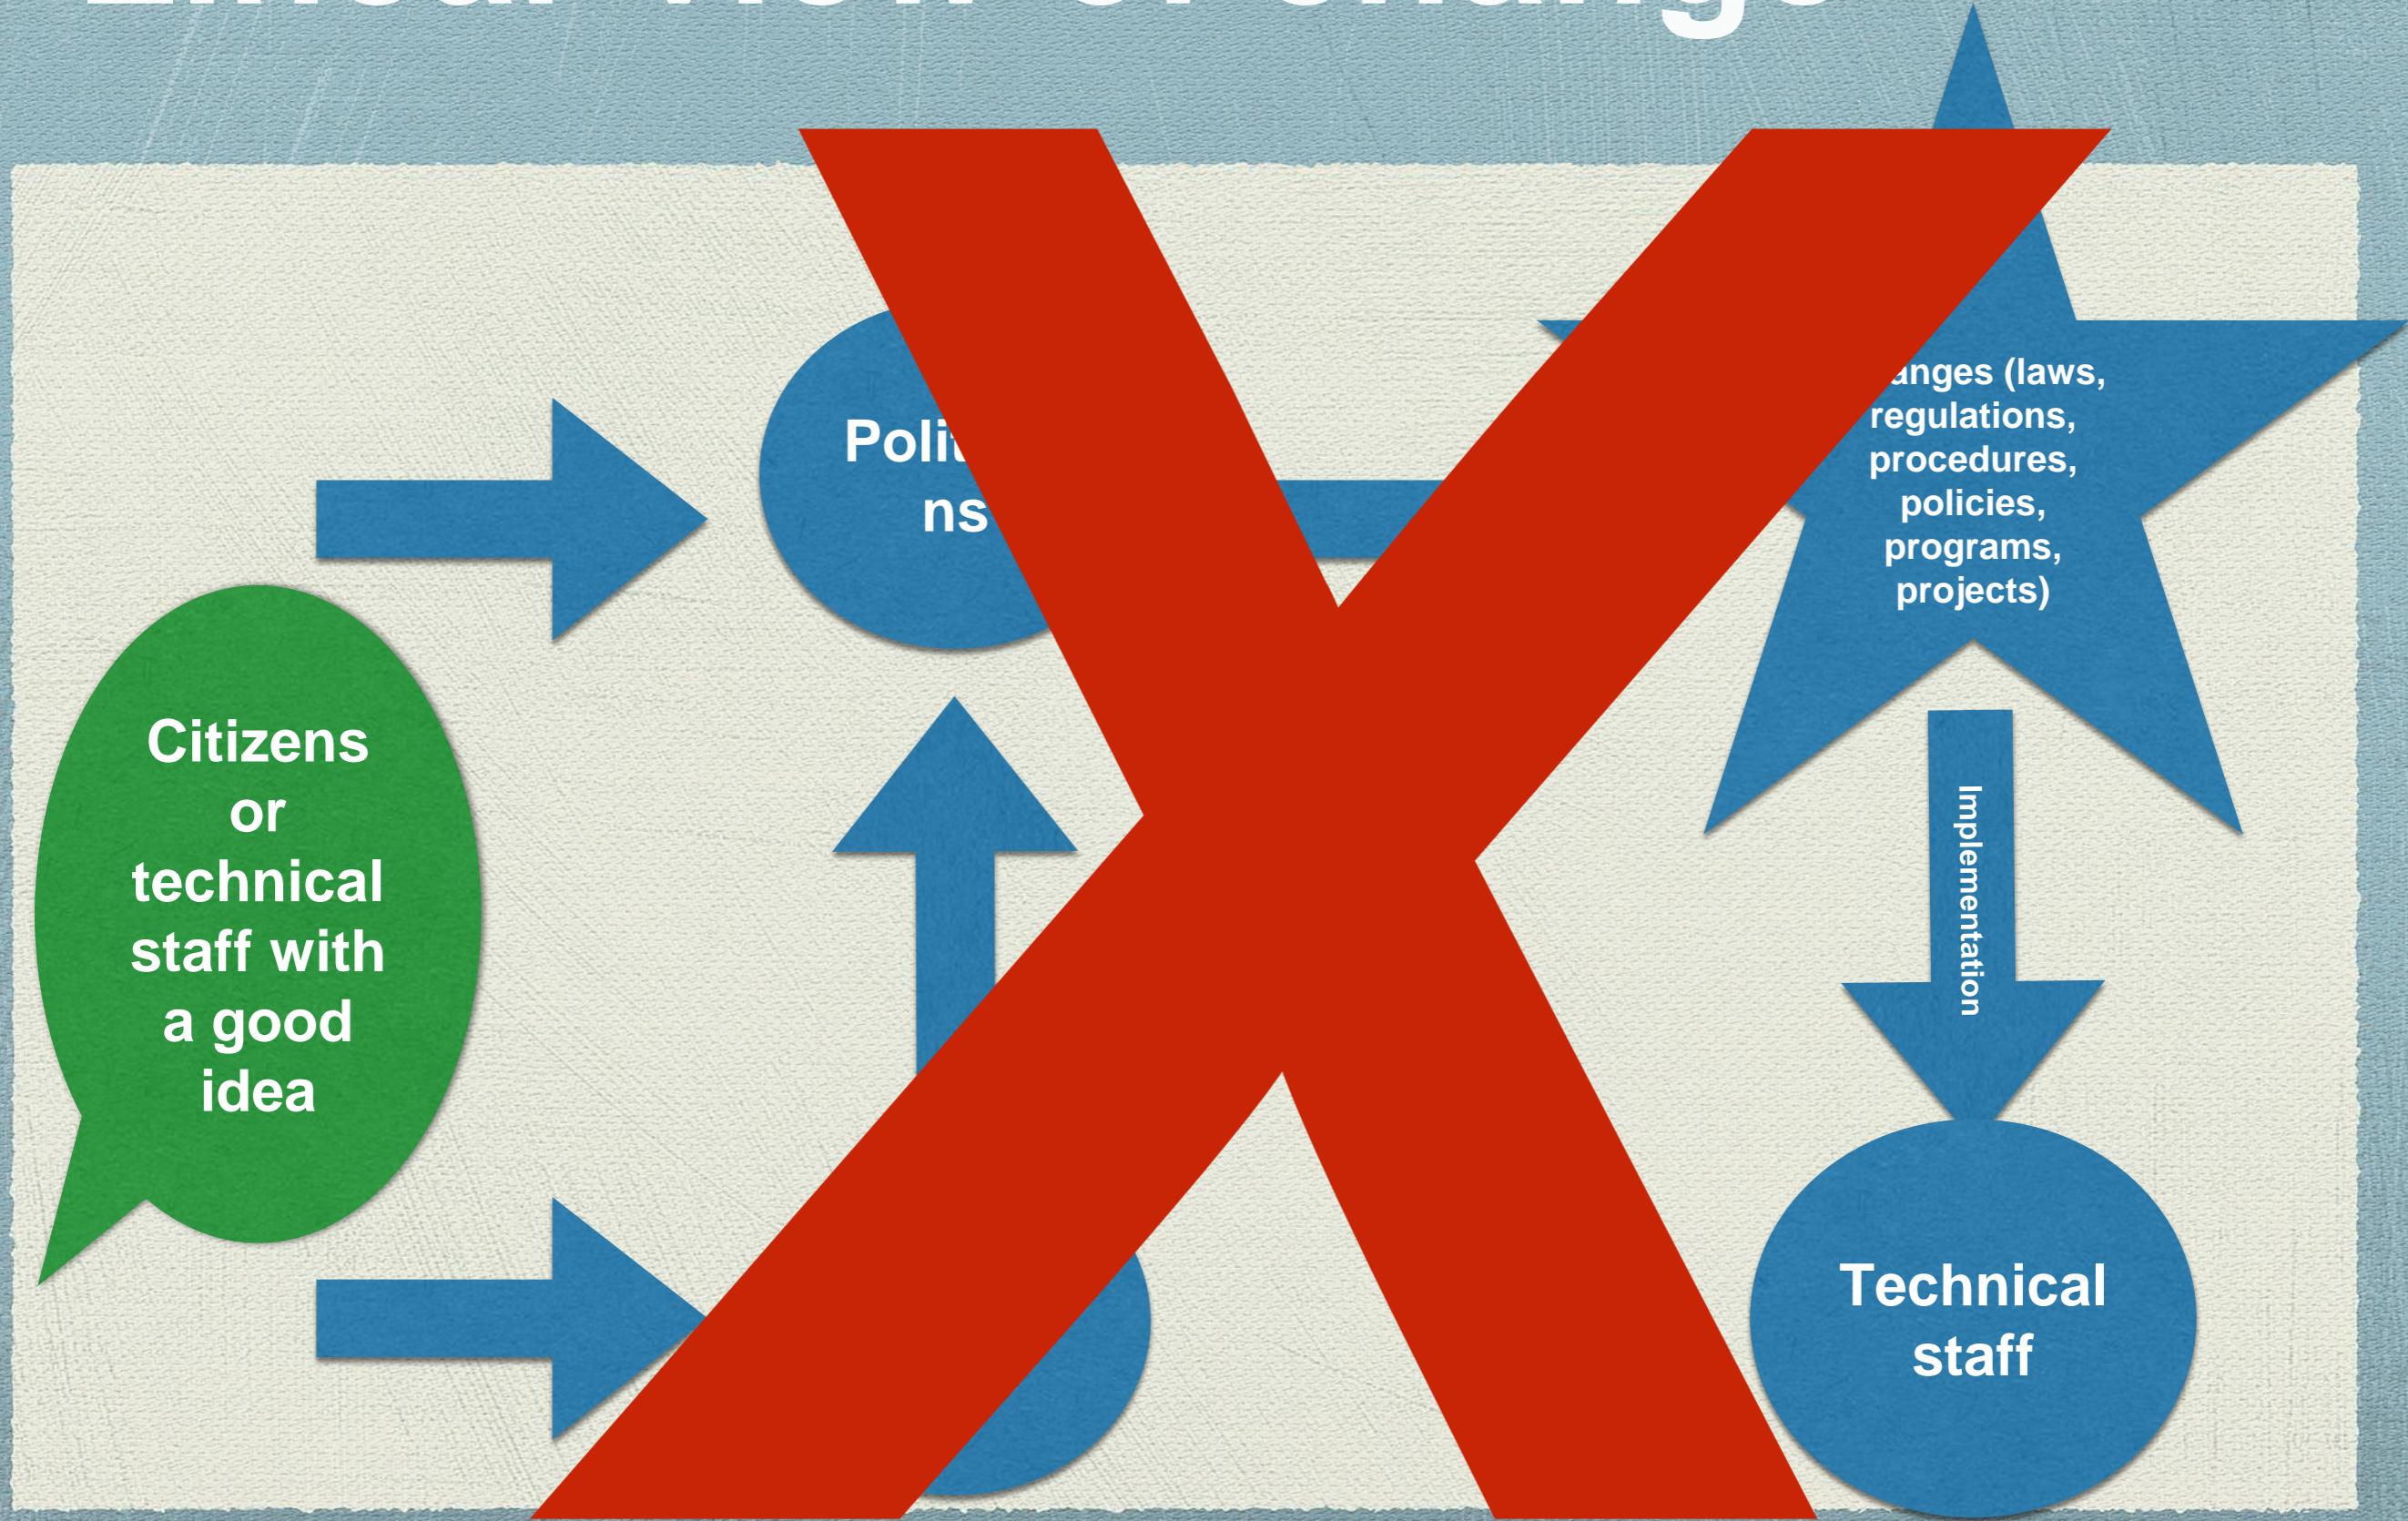

# Is one aspect more important than others?

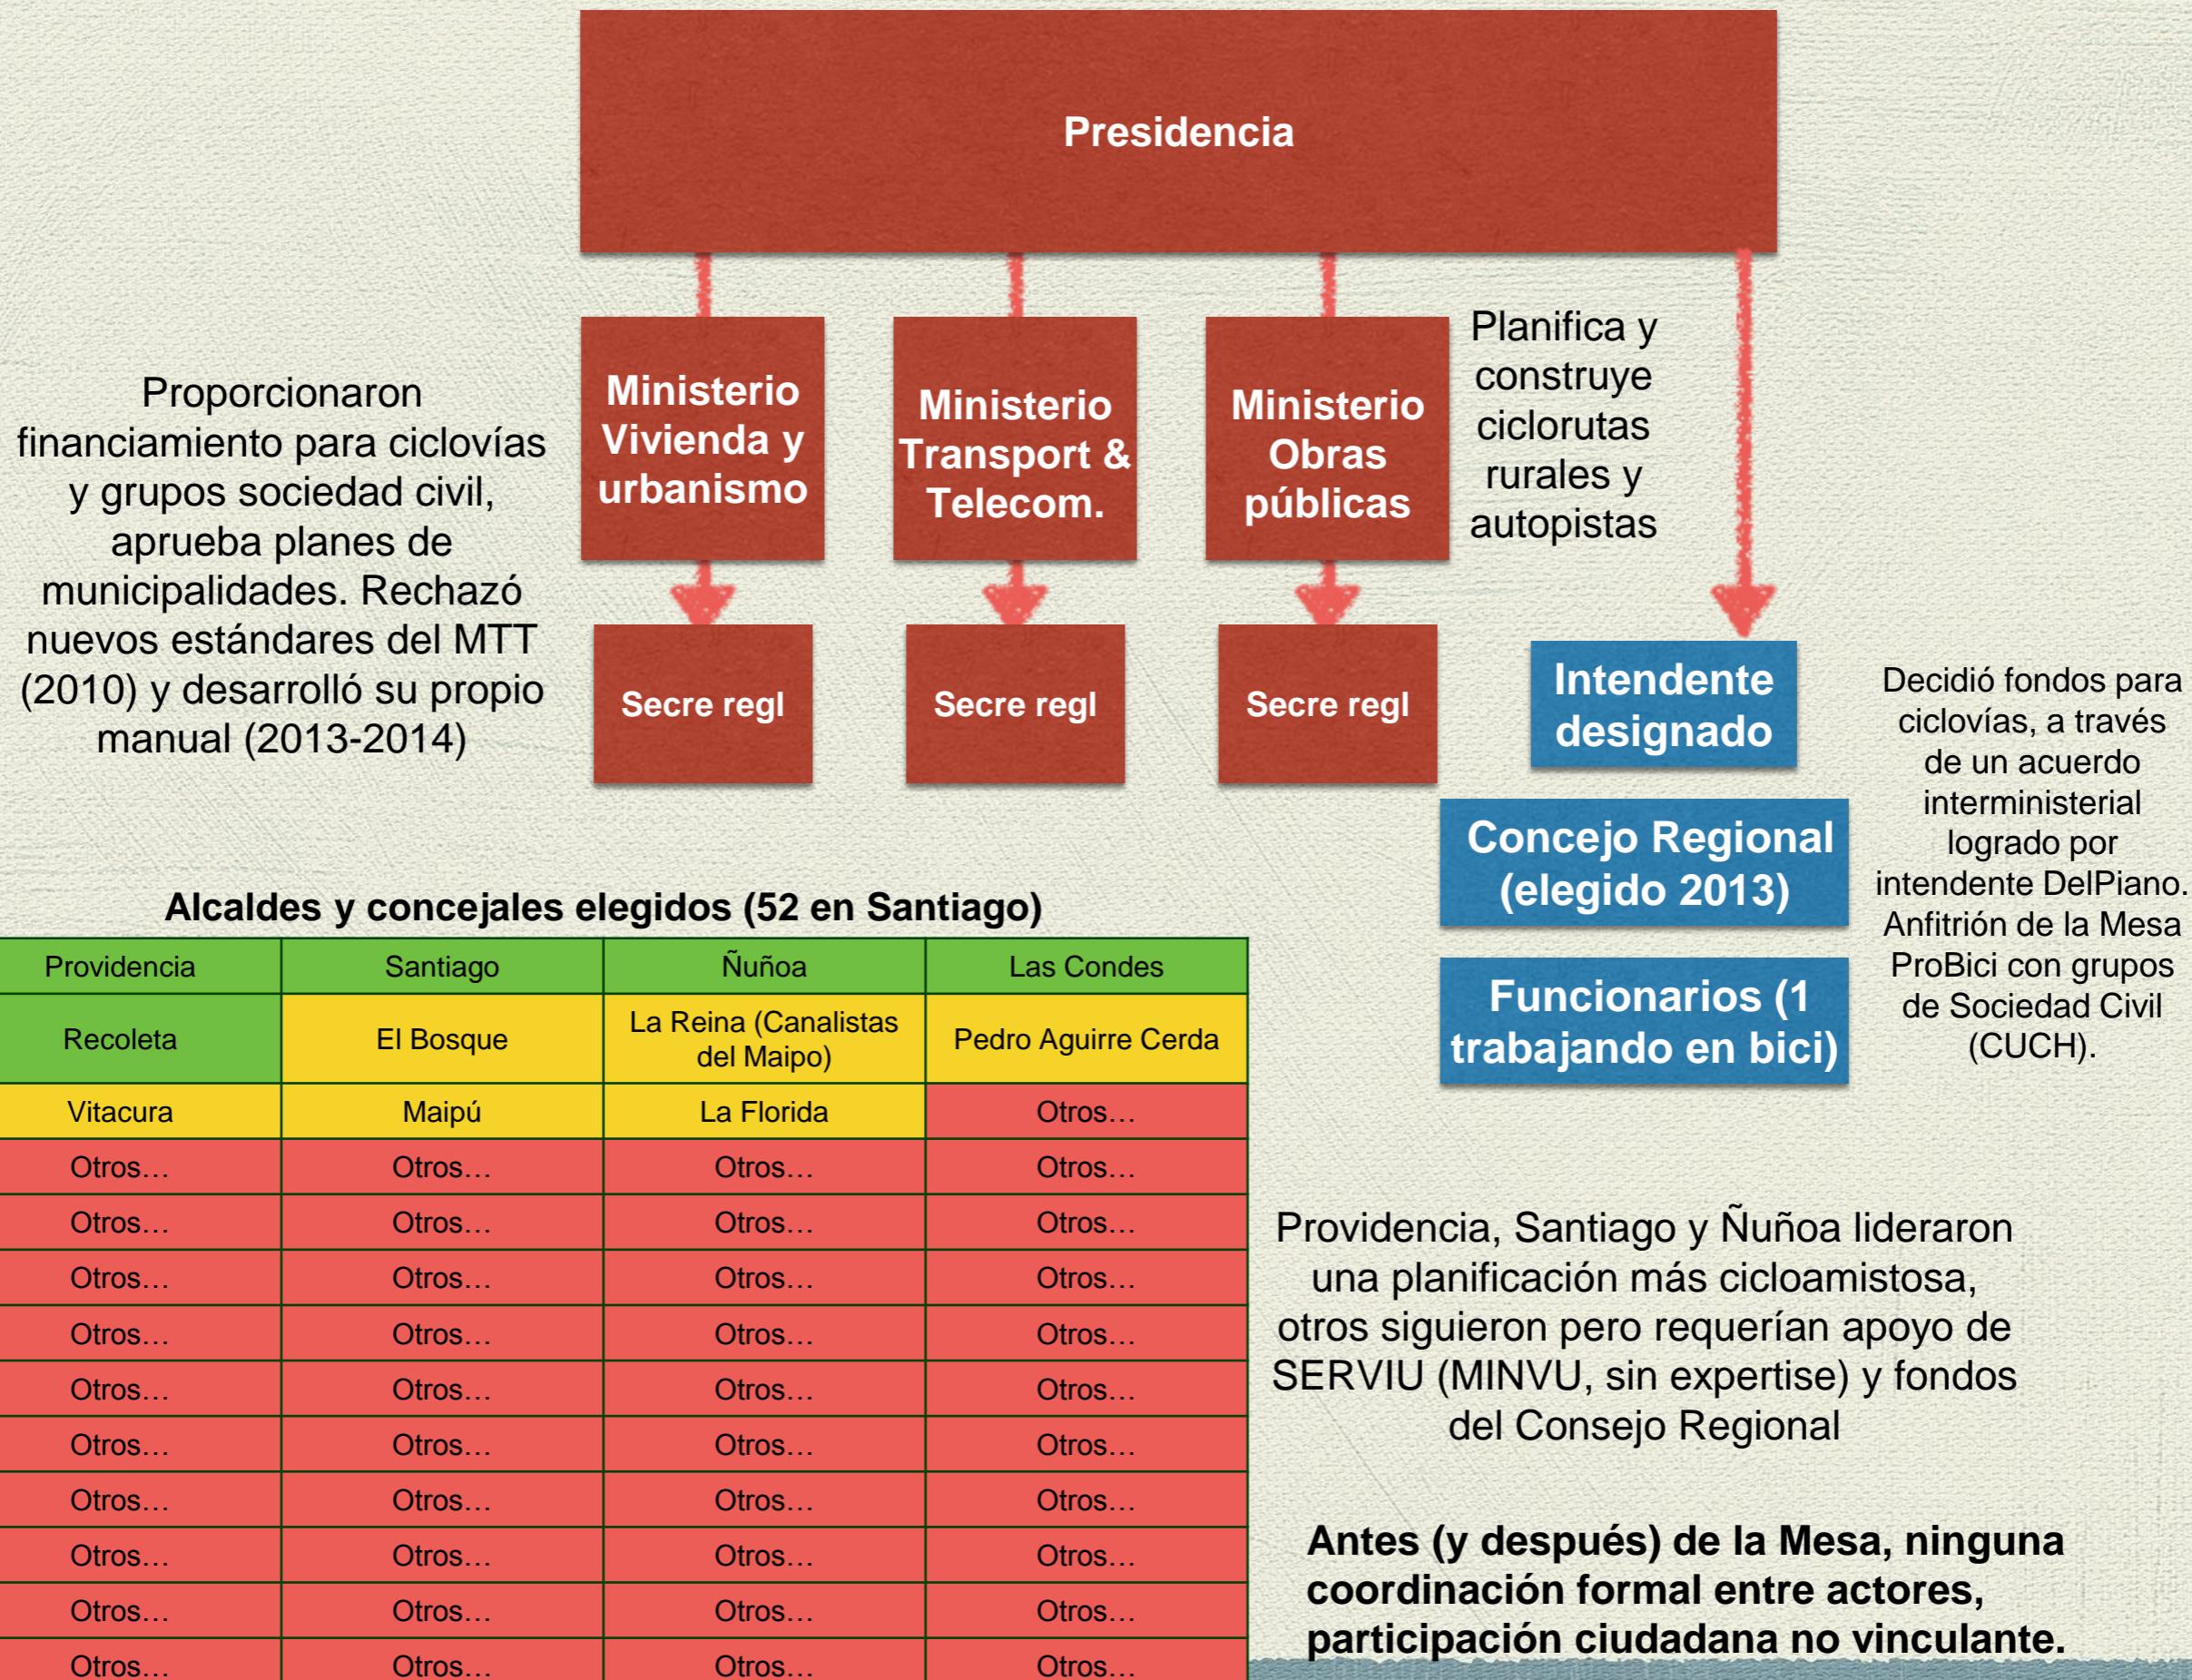

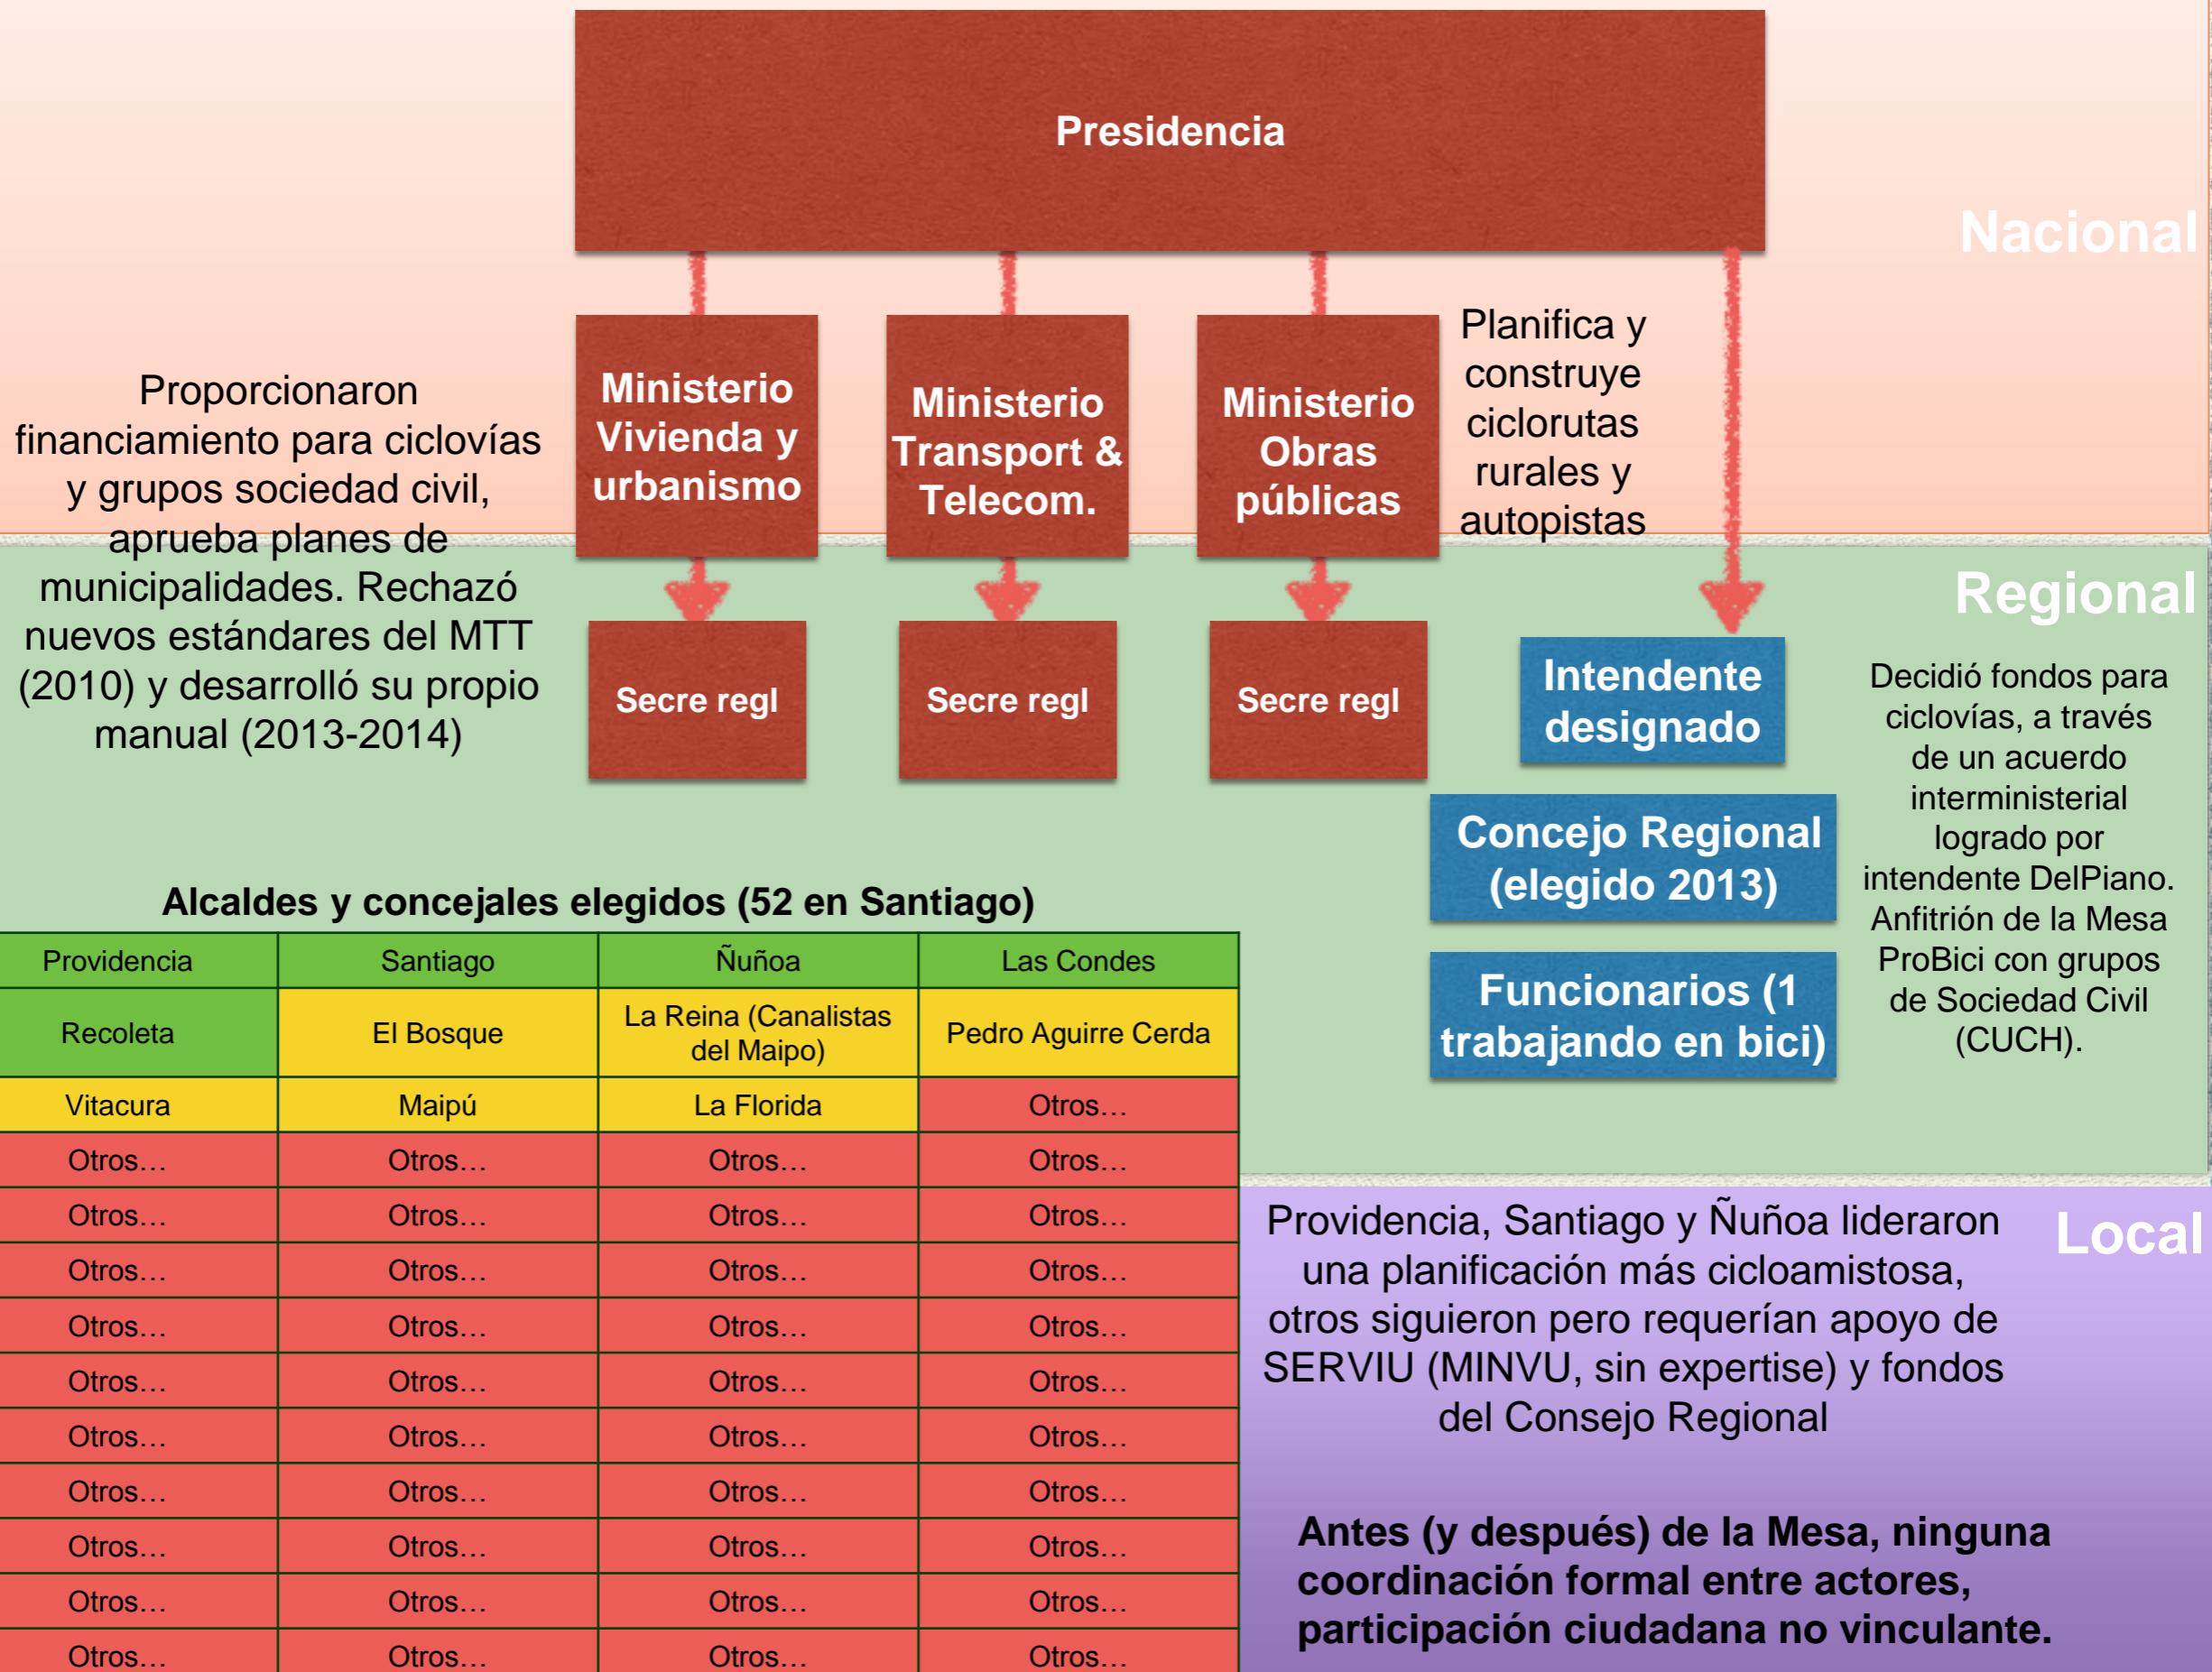

# Is one aspect more important than others?

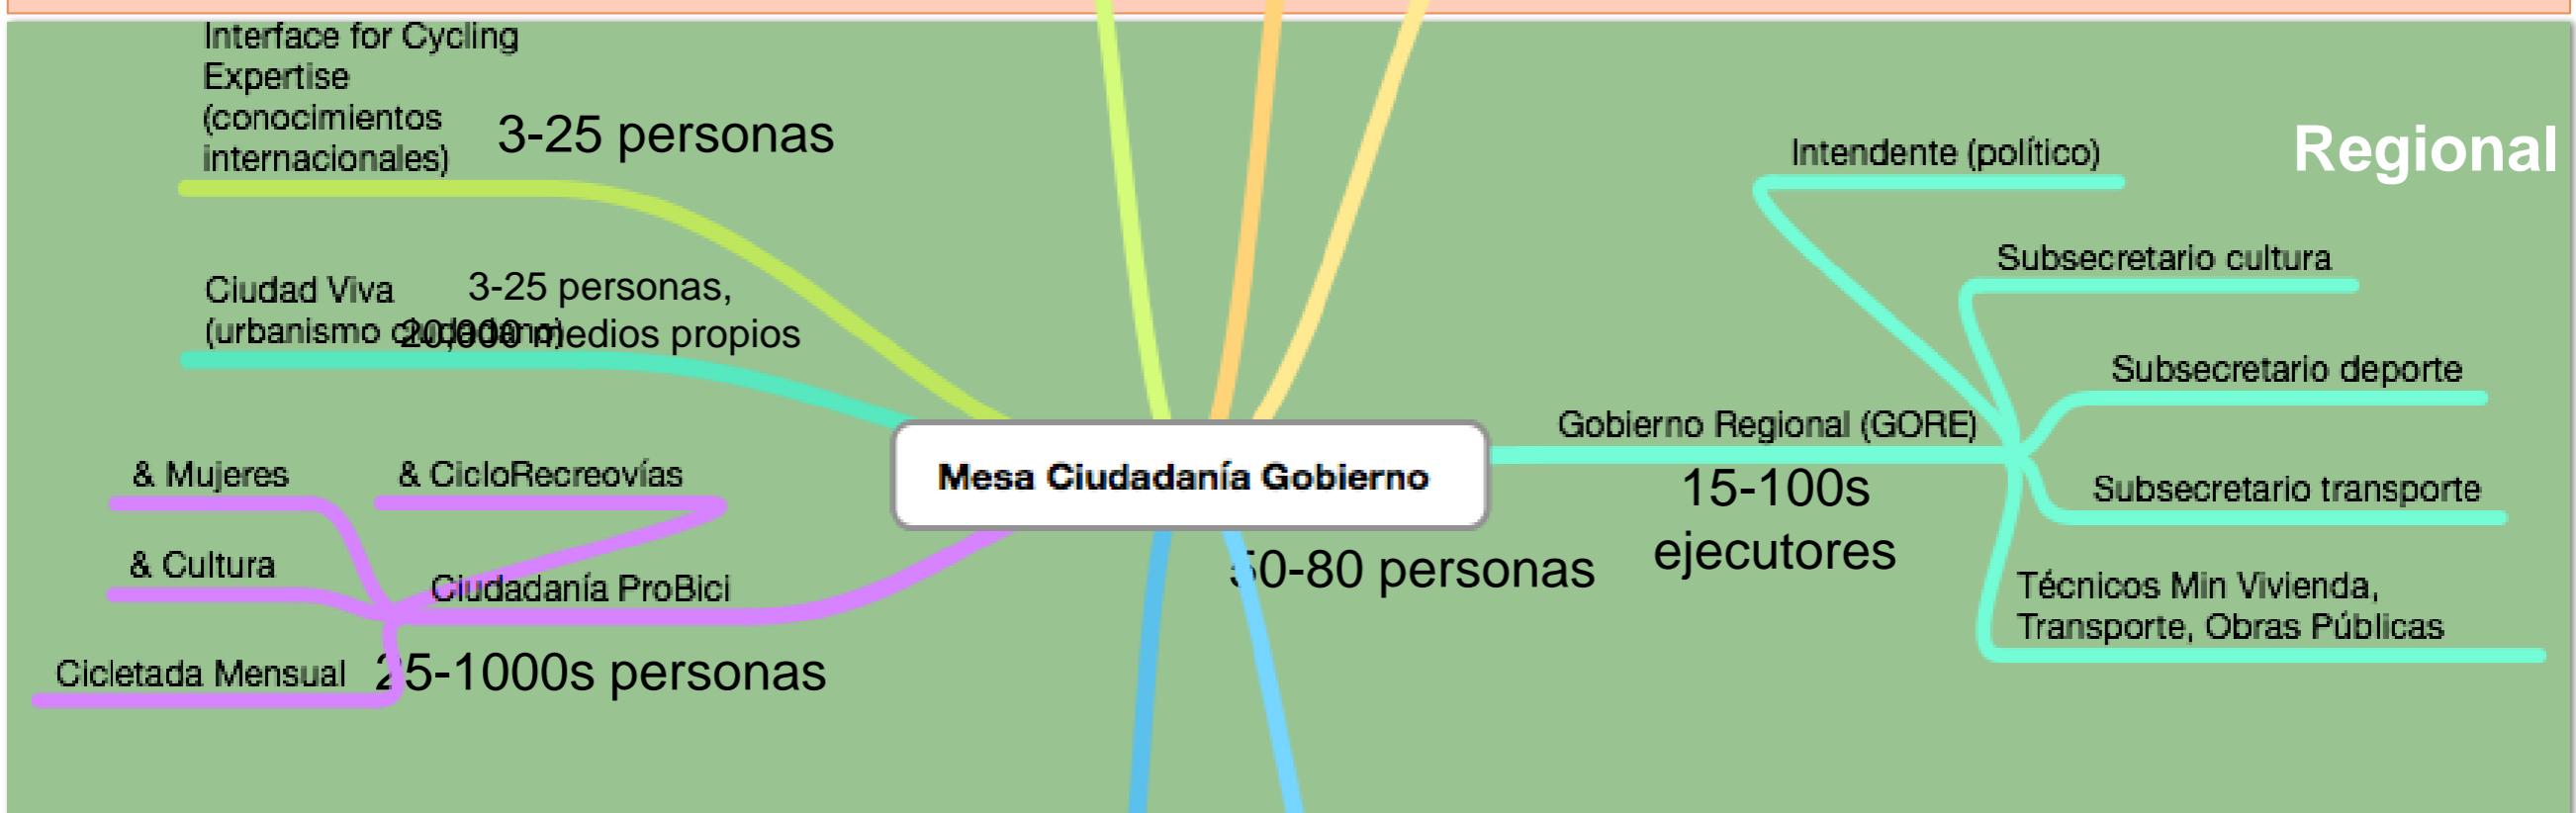

# Linear view of change

# The importance of civil society *(organized citizens)*

Conflict

The Passive Informational Approach

way, top-down

Users, citizens  
"powerless,  
ignorant, passive,  
follow orders"

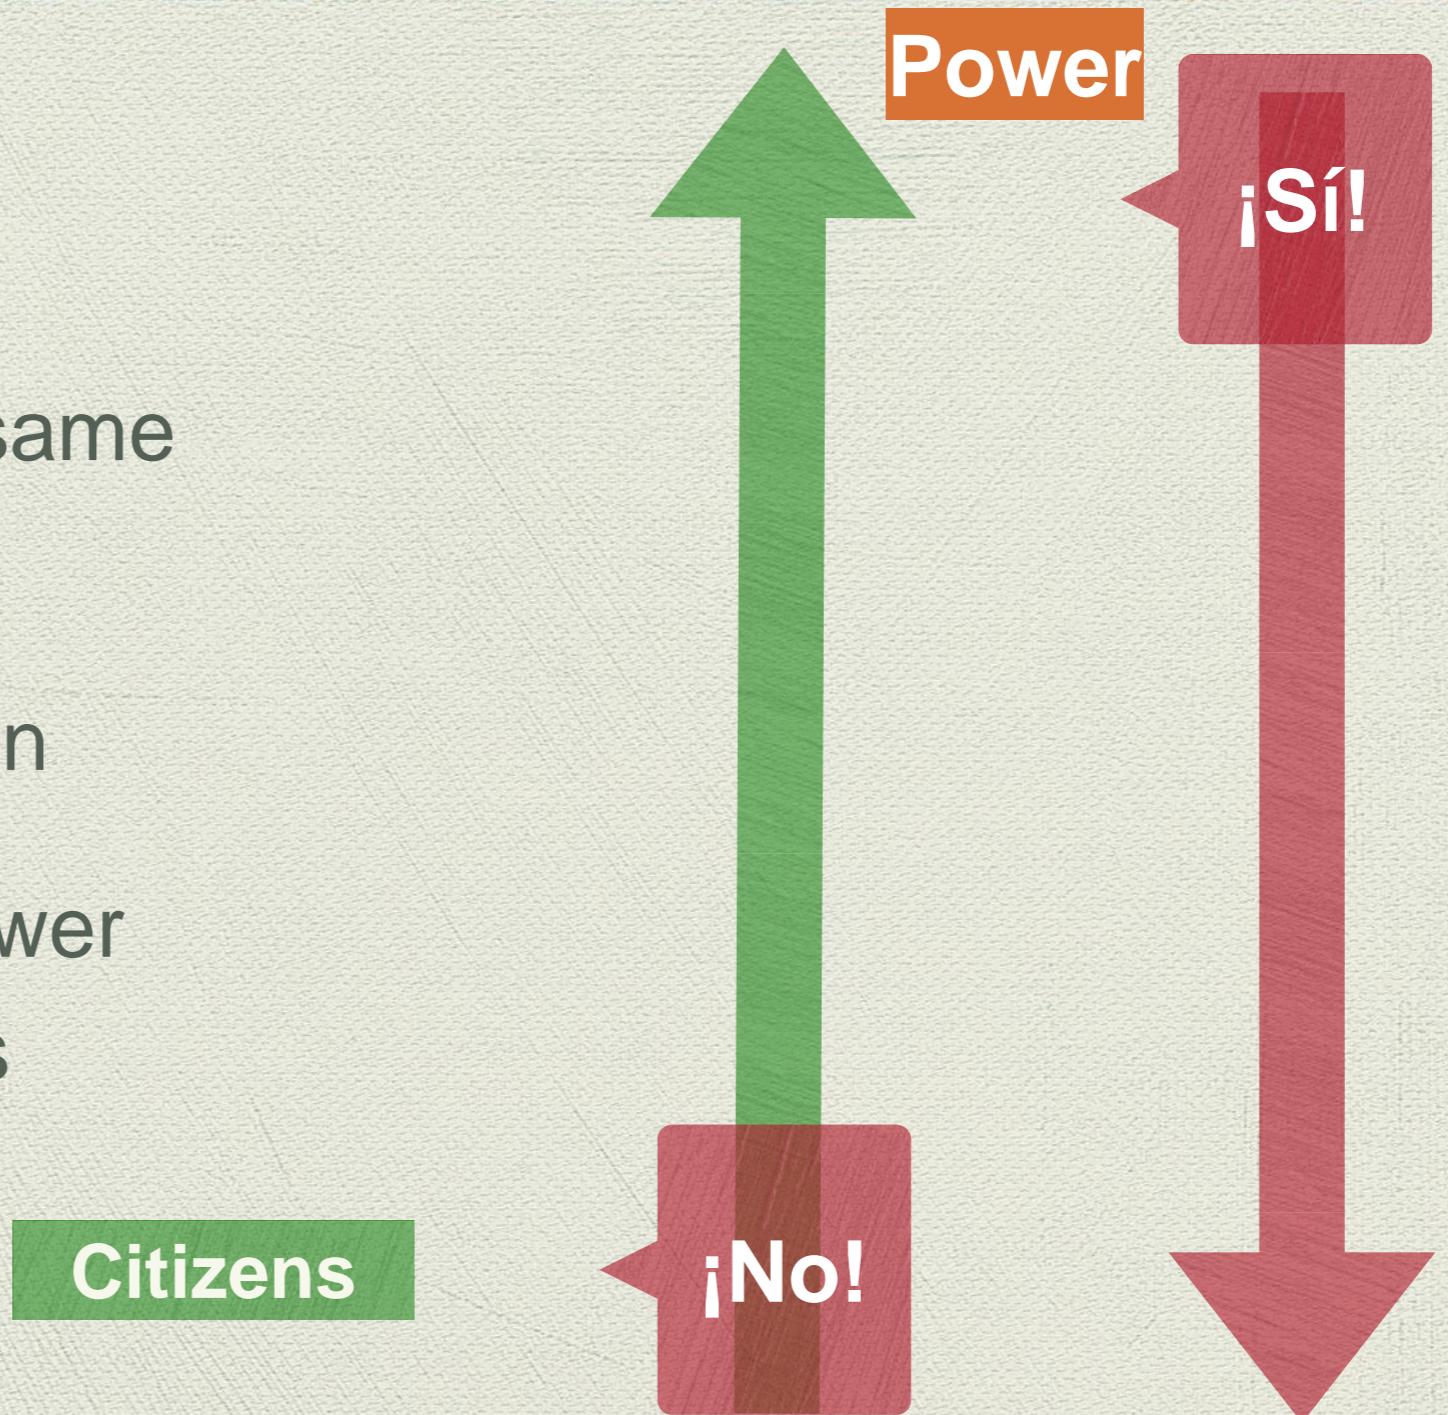

Coproducción

And the kind of “participation”

Susskind et al. 1983.

# Conflict and paternalism

- Two faces of the same coin
- Exclusion-Inclusion
- Discrimination-Power behind the scenes

# More fruitful: Co-produce, collaborate

- ◆ Deliberation
- ◆ Diversity
- ◆ Interdependence (Booher & Innes 2002)

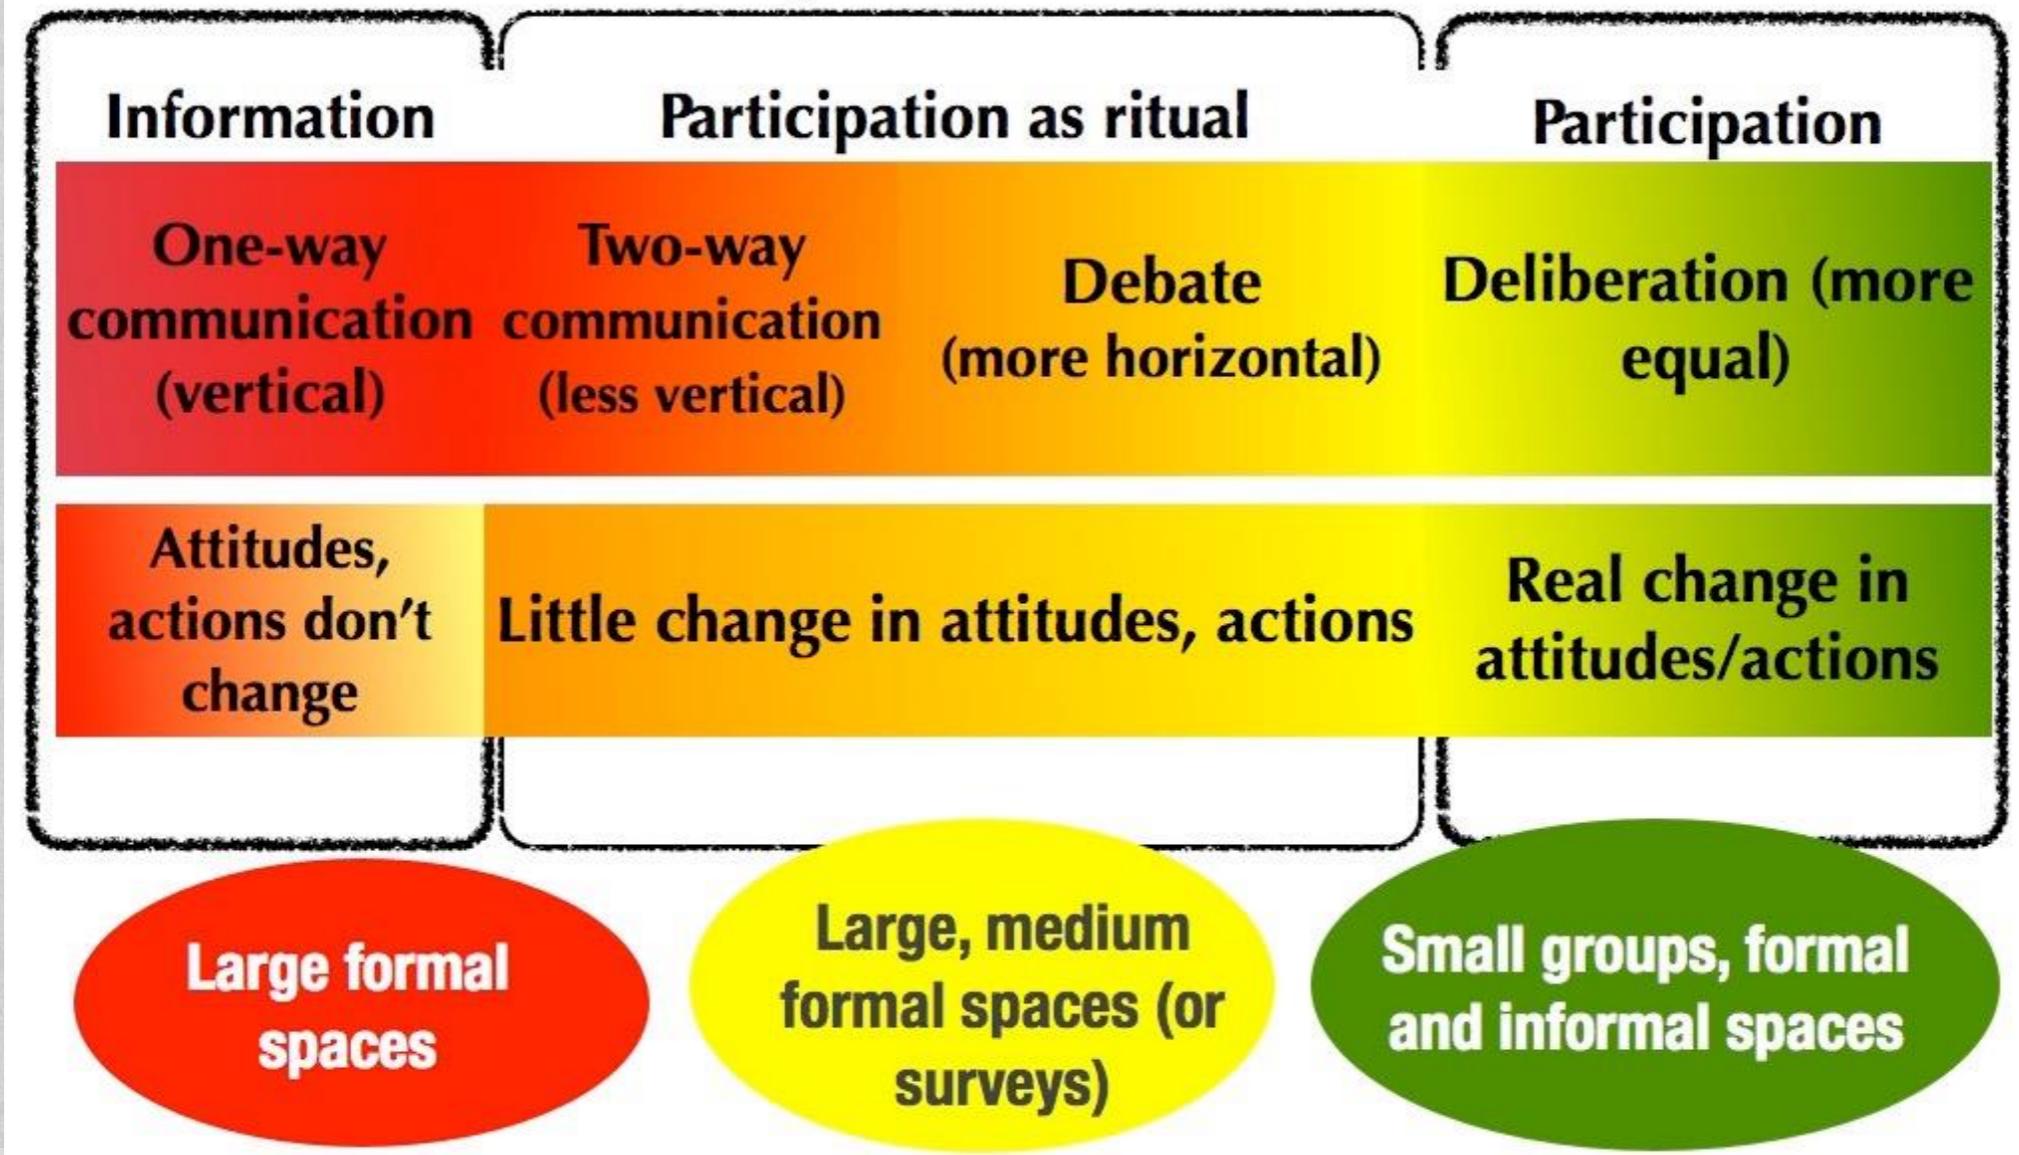

Power

I understand

- ◆ Builds strategic conviction
- ◆ Systemic change
- ◆ Credibility and continuity

# Communication/participation spectrum

Transformation requires “deep” participation in small groups

# Understand we are an “ecology” of actors

- ◆ Diverse
- ◆ Interdependent
- ◆ With *different* profiles, leaderships, strategies and organizations, and *some common* objectives

Live and let live, collaborate where we agree

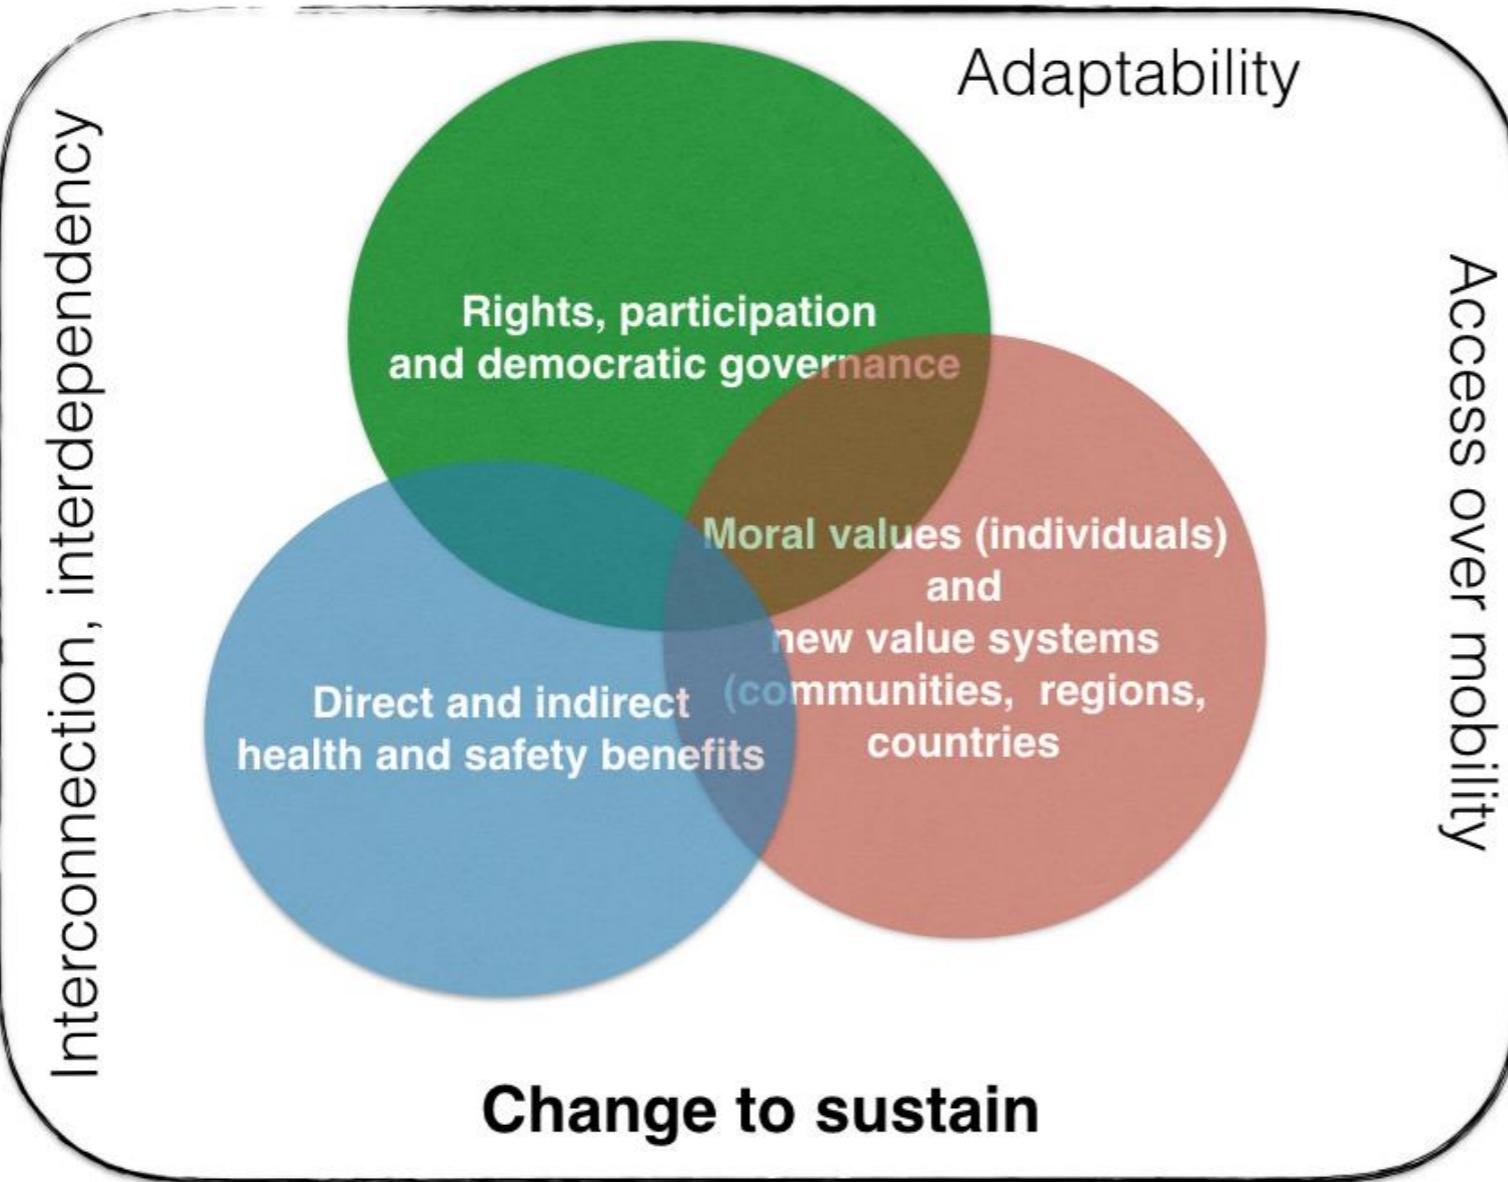

# Key lessons for planning

1. No country has achieved steady progress without a diverse, complex, robust ecology of citizen organizations.
2. Individual participation is good, but **collective participation i.e. organizations is BEST.**
3. **Civic capacity** should be a top priority for investment and funding under the Sustainable Development Goals.

# Social sustainability and transport

## New paradigm: socio-ecological systems
