Sustainable Development Goals Progress Chart 2020

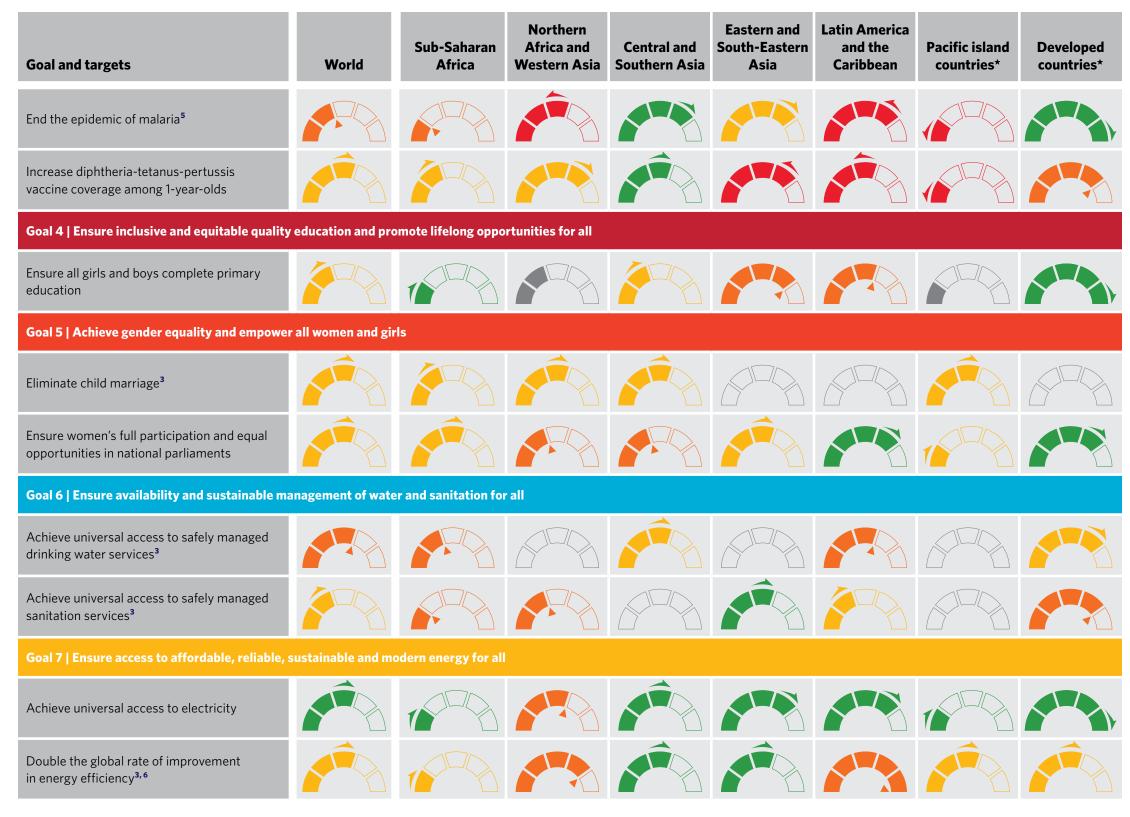

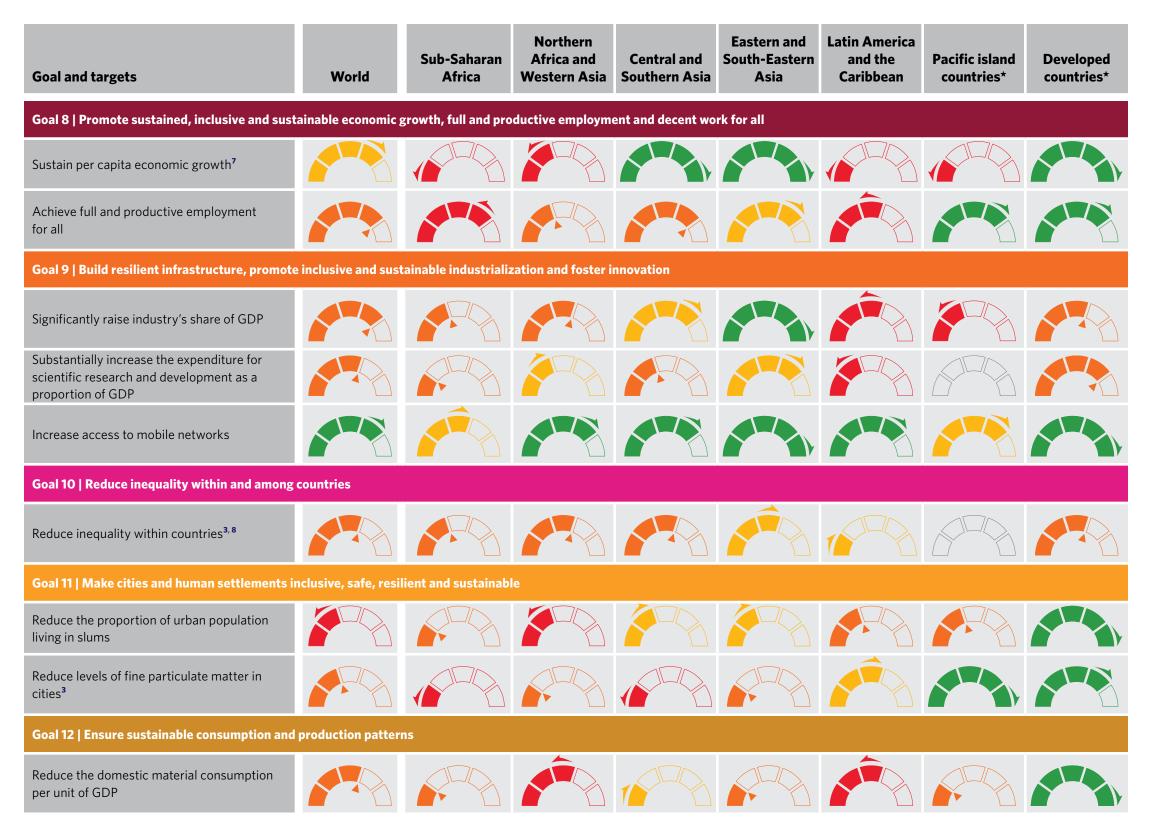

Sustainable Development Goals Progress Chart 2020

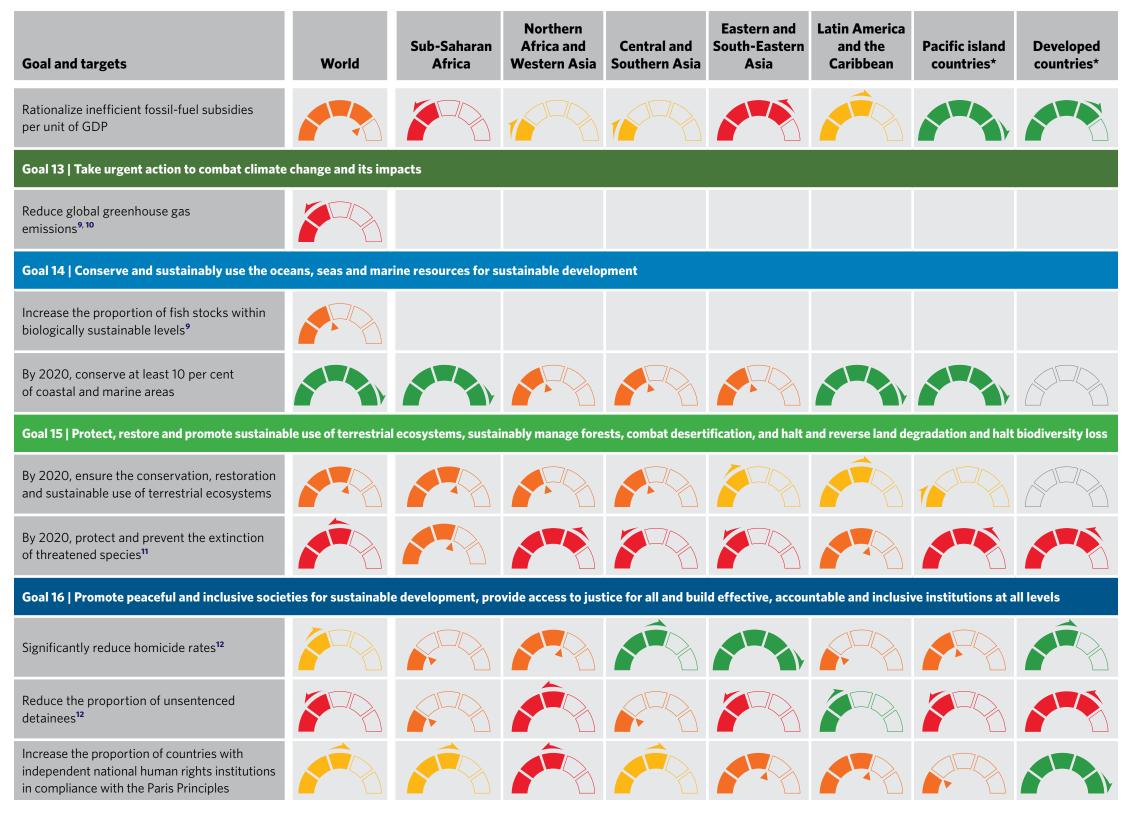

The Sustainable Development Goals Progress Chart 2020 presents a snapshot of global and regional progress by the end of 2019. It covers selected targets under the 17 Goals of the 2030 Agenda for Sustainable Development. At the beginning of 2020, the Secretary-General launched the Decade of Action, calling for accelerated solutions by national and local governments, civil society organizations and the private sector to achieve the Sustainable Development Goals by 2030. The progress chart shows how far we have come in realizing our commitments, and which areas require urgent attention. It also shows that, for most Goals, the pace of progress has been insufficient and substantial acceleration is needed.

The progress chart presents two types of information: 1) a trend assessment using stoplight colours and 2) a level of development assessment based on the latest available data using a gauge meter. The chart is based on a limited number of indicators and on information available as of May 2020. A baseline year of around 2015 is used for the trend assessment for most indicators. If there are no sufficient empirical data around that time, a baseline year of around 2010 is used. The latest available data for most indicators are from 2018 to 2019; for a few indicators, the data go back to 2015 and 2016. Most of the data used in the progress chart were compiled prior to the COVID-19 pandemic, and therefore do not reflect its impact.

| Goal and targets | World | Sub-Saharan Africa | Northern Africa and Western Asia | Central and Southern Asia | Eastern and South-Eastern Asia | Latin America and the Caribbean | Pacific island countries* | Developed countries* |
|---|-------|-----------------------|--|------------------------------|--------------------------------------|---------------------------------------|------------------------------|-------------------------|
| Goal 17 Strengthen the means of implementation and revitalize the Global Partnership for Sustainable Development | | | | | | | | |
| Ensure full implementation of the net official development assistance disbursements by donor countries ⁹ | | | | | | | | |
| Enhance access to technology by increasing internet use | | | | | | | | |
| Increase proportion of countries with a national statistical plan that is fully funded ¹³ | | | | | | | | |

Legend

Notes

- * The category "Pacific island countries" refers to Oceania excluding Australia and New Zealand. The category "developed countries" includes Europe, Northern America, Australia and New Zealand.
- ¹ Trend assessment for the world is based on 2015 global estimates and 2018 nowcast data. For other regions, the trend assessment is based on regional estimates using empirical data from countries for 2015–2018. For sub-Saharan Africa, only level assessment is available based on 2015 data.
- ² Data are available for 2016 only.
- ³ Trend assessment uses a baseline year around 2010.
- ⁴ Level assessment is based on the level of stunting prevalence. From left to right of the gauge meter, the five levels are: very high, high, moderate, low, and very low stunting prevalence.
- ⁵ Trend assessment is based on the World Health Organization Global Technical Strategy for Malaria 2016–2030, which is reducing malaria case incidence by at least 90 per cent by 2030. Level assessment is based on the level of malaria incidence. From left to right of the gauge meter, the five levels are: very high, high, moderate, low and very low malaria incidence.
- ⁶ Level assessment is based on the level of energy intensity. From left to right of the gauge meter, the five levels are: high, medium-high, medium-low and low energy intensity.
- ⁷ Baseline value is the average annual growth rate of real GDP per capita from 2000 to 2015.

- ⁸ This assessment is based on the Gini Index. From left to right of the gauge meter, the five levels are: very high, high, moderately high, moderately low and low inequality.
- ⁹ Assessment is only at the global level.
- ¹⁰ Level assessment refers to high greenhouse gas emissions.
- ¹¹ Level and trend assessment are based on the Red List Index and regional disaggregations of the index. The assessment for "developed countries" refers to Europe only. From left to right of the gauge meter, the three levels of extinction risk are: above global average (2 units of gauge), at global average (3 units of gauge), and below global average (4 units of gauge).
- ¹² From left to right of the gauge meter, the five levels are: very high, high, moderate, low, and very low level.
- ¹³ Trend assessment is based on progress from 2017 to 2019.

For regional groupings, country data and technical note for the progress chart, please refer to: <u>https://unstats.un.org/sdgs</u>. Country experiences in each region may differ significantly from the regional average.
