Roundtable 1- Enabling Sustainable Growth Opportunities in SIDS through the Ocean Sector

Green Economy in Oceans and SIDS - emerging challenges and opportunities -

United Nations Environment Programme
Green Economy in a Blue World
SIDS-focused Green Economy

- “Green Economy in a Blue World” (UNEP, 2012)
  - Small scale fishery and aquaculture, transportation, marine-based renewable energy, nutrient management, tourism, and deep water minerals

“SIDS-based Green Economy – An Analysis of Challenges and Opportunities” (UNEP, 2012)
- Small-scale fisheries and aquaculture, Tourism, Water, Energy, Waste
Fisheries and Aquaculture

Greening the fisheries and aquaculture sectors requires the overall recognition of their wider societal roles particularly the small scale operations are linked with local economic growth, poverty reduction and food security.

Aquaculture is the fastest growing food-production sector and future development prospects appear promising.

Development and investment in green technology and raising industry and consumer awareness on the sustainability are key approaches.
Coastal tourism

- Global tourism is increasingly becoming less sustainable.
- Climate change demands greening of industry.
- Tourism develop can support local economy and reduce poverty.
- Investing in greening tourism can reduce costs and enhance the value of ecosystems and cultural heritage.
- The private sector must be mobilised to support sustainable tourism and needs access to financing for investing in greening practices.
Tourism in SIDS

Issues to be considered

• Depending on a country’s development path, needs, priorities, degree of vulnerabilities, natural resources, ecosystems and the services they provide, the plans and strategies to promote an ocean-based green economy might vary.

• Development of enabling conditions includes increasing public investment and spending, developing market-based instruments, and revising the legislative and regulatory framework and enhancing institutional capacities.

• Integrated planning is important to ensure decisions are aligned with the objectives of an ocean-based green economy.
