Sustainable development in action

The Rio+20 Conference was an action-oriented conference focusing on implementation of sustainable development. Member States, the United Nations system, and Major Groups and other stakeholders are together leading the way forward to the Future We Want. Rio+20 as well as earlier sustainable development conferences have emphasized the importance of action-oriented voluntary initiatives to complement government-led action in realizing sustainable development.

Green economy policies, practices and initiatives

Green economy in the context of sustainable development and poverty eradication was one of the two themes for the United Nations Conference on Sustainable Development (Rio+20). In June 2012 in Rio de Janeiro governments agreed to frame green economy as an important tool for achieving sustainable development. Governments agreed to general principles and priority areas which will guide implementation of the green economy at all levels as well as cooperation between all the stakeholders.

The maplist of green economy policies provides a searchable, interactive global database of green economy policies and other initiatives that was developed as an information resource in the lead up to Rio+20. The various initiatives were collected either by Secretariat staff or uploaded directly into the database by member states, international organizations and major groups through the online form. To add more initiatives related to Green economy please Sign in to My Account.

Total initiatives: 307
