Presentation at OWG 5th Session
November 26, 2013

Aldo Caliari, Rethinking Bretton Woods Project
Center of Concern
Preface

Recommendations on economic policy NOT intended as goals: they are means.
Thinking of them as goals risks oversimplification and conceptual confusion.
They are essential part of the enabling environment to achieve sustainable development goals – alongside methodological and qualitative factors.
Should be compiled into Plan of Action, inextricable component of post-2015 development agenda, together with the Sustainable Development Goals.
Structure presentation

Financial regulation
International monetary system
Governance of IFIs
Intergovernmental cooperation tax matters
Debt sustainability
Infrastructure
Trade
Financial regulation

Reversal of finance-driven economy needed. These require:

Freedom for countries to use capital controls

Financial market regulation should be: primarily national, comprehensive (all actors) and participatory (for all affected)

No financial institution should be allowed to grow too big or complex that in case of failure it cannot be safely wound down without risk to the economy and vital banking services.

Simplification and downsizing. Cross-border resolution.
Financial regulation II

Capital requirements: should emphasize leverage ratio; not allow banks to establish risk weights; bring implementation forward (2015)

Shadow banking: strict reporting requirements to give basis for more effective regulation; clearance mechanism for innovative products

Credit rating agencies: governance reform to ensure accountability; limit regulatory reliance; alternatives to “issuer-pays” model
Financial regulation III

Derivatives markets regulation:

Commodity derivatives reform especially relevant to developing countries (harm to import and export side)

All derivatives must be traded in public exchanges and centrally cleared, in addition to being reported to trade registers. Central clearing houses should have adequate capital buffers and require collateral for each transaction. (Ban particularly risky products such as *Credit Default Swaps*, and dangerous speculative practices like *Naked Short Selling* should be banned.)

Set ex-ante position limits and avoid publicly-insured firms’ involvement in derivatives transactions

Financial firms should not be engaged in physically holding commodities
International Monetary System

Macroeconomic policy and social policy, not separate categories:
Tackling unemployment, inequality and exclusion part and parcel of lasting macroeconomic stability
Counter-cyclical, rather than pro-cyclical, macroeconomic policies—subject to *ex ante* and *ex post facto* gender, human rights and environmental impact assessments
Growing consensus on shortcomings of a domestic currency of one country as reserve and trading currency, but not on reform paths out.

Four key challenges to address in reform:
• Rebalancing and achieving coordination among trade deficit and surplus countries;
• Ensuring adjustments are non-recessionary;
• Limiting exchange rate volatility; and,
• Promoting innovative mechanisms to enable the generation of development and climate finance.

Three pillars to address them:
• A credible system for coordination among deficit and surplus countries;

• A transition path towards a revamped system with a supranational currency as the cornerstone – revamped Special Drawing Rights can serve as a proxy leading towards such currency; and,

• Support for countries to use capital flows management measures

Complemented by regional financial and monetary architectures on: 1) reserve pooling, 2) development finance institutions, 3) currencies, 4) capital flows management coordination.
Governance of Int’l Fin Institutions

Implement already agreed voting reforms, including transfer of 2 ED chairs from Europe (one of them to Africa)

Reform quota formula giving more weight to “demand” variables; greater weight to Purchasing Power Parity and population; double majorities

Leadership selection

Broaden membership financial regulation bodies (countries that currently are “policy-takers”)
Intergovernmental cooperation tax matters

Progressive, transparent and accountable taxation systems should be central to any sustainable development strategy. (Estimates of losses to developing countries due to illicit financial flows: USD 800 bn a year)

Indispensable international cooperation measures:
--Increase tax transparency, close tax havens & secrecy jurisdictions
--Strengthen UN’s role, including upgrading UN Committee of Experts on International Cooperation in Tax Matters
--Implement Financial Transaction Taxes (good for revenue and for systemic stability)
--International agreement on public automatic exchange of information and public registries of disclosure of beneficial ownership of companies

Prevent transfer mispricing: including County by Country reporting
OECD “Base Erosion and Profit Shifting” Plan: promising but could have negative impacts, too (if reaffirms wrong principles)
Debt sustainability

Debt re-emerging as issue in int’l agenda:
Among LICs: 4 countries are in debt distress, 13 are at high risk and 27 at moderate risk
Several Caribbean and Pacific Island countries at risk or in distress
European bailouts, Argentina vulture fund case
Roll back of QE to have further impacts
Debt sustainability II

Recommendations:

Reviewing onerous debts and cancelling illegitimate debts, especially in least developed countries;
Revising Debt Sustainability parameters to make them more objective and prioritize financial needs for meeting development goals above debt repayments.
Establishing an independent and fair public debt workout mechanism to avoid “too little, too late” that prevails in the current ad hoc, case-by-case patchwork of mechanisms to address debt crises. Ex ante rules for fair burden-sharing would be the best way to promote responsible lending and prevent build up of unsustainable debt.
The UN should lead design and implementation of such a mechanism.
Features: 1) One single “insolvency” process that involves all creditors, 2) Impartiality in decision-making over terms and conditions of a restructuring, 3) Impartial assessment of individual claims’ validity, of the sovereign’s sustainable debt level and hence eventually necessary debt relief.
Infrastructure

Infrastructure: a precondition to new development agenda.
Recommendations on financing infrastructure:
Form should follow function → if needs of vulnerable and poorest communities priority, then infrastructure: 1) appropriate scale (not necessarily large), 2) shorter time horizon, 3) safeguards that abide by Rio Pples., 4) embedded in industrial policy
Avoid fixation on PPPs: PPPs can socialize costs while privatizing benefits, hide costs and risks (explicit and implicit contingent liabilities, tax incentives, under-investment), worsen inequality (income/access)
Broad range of financing options, from public to private, should be discussed (and their distributional implications)
When choosing a PPP form: fiscal and debt risks properly scrutinized through mechanisms for organized social participation and monitoring, contract transparency, institutional and capacity pre-requisites should be in place
Trade

Review trade and investment agreements
Close democratic deficit in trade agreements
Guarantee meaningfulness, weight, operationalization and legal status of Special and Differential treatment, removal of agriculture subsidies in North, and flexibilization of IPR regime
Compatibilize trade and investment rules on financial services with re-regulation of finance.
Respect, protect and fulfill obligations under the Maastricht Principles on Extraterritorial Obligations of States in the realm of trade and investment agreements
Thank you.
