GLOBAL PARTNERSHIP
FOR SUSTAINABLE DEVELOPMENT DATA

CONVENING, CONNECTING, CATALYZING

Introducing a pioneering partnership that unites data champions, both traditional and new, around a common vision — to put data at the heart of sustainable development

WHO WE ARE

The Global Partnership for Sustainable Development Data is a multi-stakeholder network of data champions working to galvanize political commitments, align strategic priorities, foster connections and collaborations, spur innovations and build trust in the booming data ecosystems of the 21st century.

We have more than 100 members globally, representing the full range of data producers and users working to harness the data revolution for sustainable development: governments, companies, civil society organizations, international organizations, academic institutions, charities, official statistics and data communities.

WHAT WE DO

- Bring the benefits of a multi-stakeholder partnership on data to the local level by supporting country level roadmaps for sustainable development data; bridging data gaps; and improving capacities to generate, share, and use statistics and data.

- Support the strengthening and promotion of international norms and guidelines, and build a global consensus on principles for taking advantage of the data revolution for development.

- Co-convene thematic, regional, and global multi-stakeholder data forums to foster increased political commitment, collaboration, and innovation.

- Help align and mobilize resources through donor coordination and the launching of trust funds to support data innovations.

WHY WE DO IT

In September 2015, 193 world leaders committed to 17 Sustainable Development Goals to achieve three extraordinary things in 15 years: end extreme poverty, fight inequality and injustice, fix climate change.

To reach these goals, we must confront a crisis at the heart of the world's most pressing challenges—a crisis of poor data. Limitations in data production, quality, access, and use are stunting the fight to overcome global challenges in every area—from health to gender equality, human rights to poverty, education to energy.

But change is coming — a data revolution is underway. Robust and powerful data ecosystems are emerging and being made more accessible through government open data initiatives and data sharing by private actors. The Global Partnership will be there to help build an enabling environment for harnessing the data revolution for sustainable development.
