

Practical Approach in Chemicals Legislation - Japan's Experience

12 May, 2010 Kazu TAKEMOTO Vice-Minister for Global Environment Affairs, JAPAN

Contents

- 1. Global and National Policy Development
- 2. Japan's Experience in Chemical Legislations
 - 2-1. Hazard-based Approach
 - 2-2. Risk-based Approach
- 3. International Policy Harmonization

- **1. Global and National Policy Development**
- **Global Development in Chemicals Management**
- 1992 Agenda 21 (Chapter 19: Chemicals Management)
- 2002 WSSD 2020 Goal (Johannesburg)
 - "By 2020 chemicals should be produced and used with minimal adverse effects to human health and the environment."
- 2006 SAICM: Strategic Approach to International Chemicals Management (ICCM1, Dubai)

National Policy Development

Japan: Chemical Substances Control Law (CSCL; 1973) USA: Toxic Substances Control Act (TSCA; 1976) EU: <u>Registration, Evaluation, Authorisation and Restriction on</u> <u>Ch</u>emicals (REACH; 2006)

2. Japan's Experience in Chemicals Legislations History of Environmental Pollution

- 1950's and 1960's Environmental Pollution throughout Japan such as "Minamata Disease" (caused by <u>methyl mercury</u>) and "Yokka-ichi Asthma" (caused by <u>SOx</u>)
- 1967 Basic Law for Environmental Pollution Control
- 1967 <u>PCB pollution</u> outbreaks
- 1968 Air Pollution Control Law
- 1970 Water Pollution Control Law
- 1971 Environment Agency
- 1973 Chemical Substances Control Law (CSCL)

2-1. Hazard-based Approach

PCB Pollution Outbreaks

Focusing on <u>Persistent</u>, <u>Bio-accumulating and</u> <u>Toxic chemicals</u>, as the first step

1973 Chemical Substances Control Law (CSCL)

➢To prohibit producing, importing and using persistent, bio-accumulating and *toxic chemicals* such as PCBs, and

➤To introduce a system to examine newly-produced or imported chemicals.

Limited target chemicals,

but effective to regulate in a timely manner

2-2. Risk-based Approach

 To expand the scope of target chemicals, by adopting "<u>Risk-based Approach</u>".

1986: CSCL Amendment

To regulate persistent and toxic (but non-bioaccumulating) chemicals, by introducing <u>reporting</u> <u>production/import amount</u> and labeling systems.

To regulate persistent chemicals with insufficient data on toxicity, by <u>reporting production/import</u> <u>amount</u> and by requesting further examination

Environmental Risk Management in Japan

- 1993: Basic Environment Law
- 1994: Basic Environment Plan

 <u>To introduce the concept of the environmental risk</u>
- 2000: Basic Environment Plan II
 - <u>To consider ecological risks</u>
- 2006: Basic Environment Plan III
 - To introduce policies on:

Risk Assessment, Management and Communication

 To further development national policies along with international perspectives

Law on PRTR System (1)

(PRTR: Pollutant Release and Transfer Register)

- 1996 : OECD Recommendation on PRTR System
- 1999 : Law on PRTR system

[Purposes]

- To improve voluntary chemical management by business sectors, and
- To prevent environmental problems

[Policy Instruments]

- Reporting of releases and transfers by stationary sources (mainly manufacturing industries),
- Estimation of releases from non-point sources by the government, and
- Publication of aggregated data (Annually since 2003 for 2001) data) 6

Law on PRTR Systems (2)

- 2008
 - Scope Expanded:

target chemicals and sectors

(to be applied as of 2010 data)

- Target chemicals (to <u>462</u> from 354),
- <u>Medical service</u> was added
- 2009

PRTR data from facilities are available on the web in addition to aggregated data of companies.

2003 CSCL Amendment

1. Introduce Examinations and Regulations with consideration of the <u>environmental effects</u>

Key Points

- 2. Add new regulation for persistent and bioaccumulating (<u>but insufficient data on toxicity</u>) chemicals (as the "Type I Monitoring chemicals")
- 3. Expanded Examinations focused on potential exposure to the environment
- 4. Compulsory reporting of hazard information obtained by business

Japan HPV Challenge Program

◆ Launched in June 2005, to collect data of existing chemicals.

- Voluntary program under cooperation between the private and public sectors
- Collected Information are to be publicized.

2009 CSCL Amendment (1)

Background

- 1. Increasing public concern about chemical substances
- 2. Need to achieve international goals on chemicals management
 - To minimize adverse effects of all chemicals on human health and the environment by 2020 (WSSD2020 goal).

3. Need to follow up the international agreement

- Parties to the Stockholm Convention agreed on exceptional use of the regulated chemicals.

2009 CSCL Amendment (2)

(1) <u>Coverage expanded to all existing</u> <u>chemicals</u>

(2) Following up International Agreements

- -To cover chemicals newly listed under the international convention
 - Semiconductors and fire fighting foam etc.

(3) <u>Appropriate Regulations on chemical</u> <u>substances in the supply chain</u>

- 3. International Policy Harmonization
- (1) OECD Policy Review on Hazardous Chemicals
 OECD reviewed national policy on hazardous chemicals, such as PCBs and mercury in 1970's
 - Reflecting scientific data and knowledge to CSCL (1973) implementation
- (2) Policy Harmonization and Information Sharing
 1981 OECD Council Decision on <u>Mutual Acceptance of</u>
 <u>Data</u>, <u>Test Guidelines</u> and <u>Good Laboratory Practice</u> (GLP).
 - OECD Test Guidelines are adopted in CSCL regulations
 - Testing laboratories authorized by Amendment CSCL (2009) are required to comply with OECD/ GLP.

Conclusions

- (1)Hazard-based Approach at Initial Phase
- > It is a good starting point to regulate hazardous chemicals.
- It is the first step to prioritize chemicals in line with their hazardous levels and global interests.
- It is efficient and effective to introduce regulations in response to <u>the Stockholm Convention</u>.
- International supports can be easily mobilized for these approaches.
- (2) It is crucial to involve a wide range of Stakeholders : Industries and NGOs.
- (3)International Policy Harmonization is important to step up national policies.
