

An integrated approach for implementation of the SDGs and biodiversity MEAs

Caribbean Community Secretariat

Thérèse N. Yarde, PhD

Make Horizontal Linkages

Using the DPSIR (drivers, pressures, states/trends, impacts, responses) approach, clarify synergies among biodiversity-related multilateral environmental agreements (MEAs) as well as synergies between these MEAs and SDGs 14 and 15.

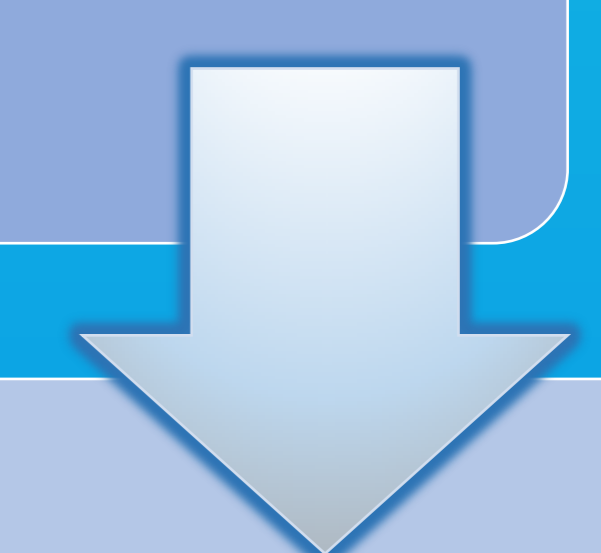

Make Vertical Linkages

Using an ecosystems services approach, identify how biodiversity objectives in MEAs and SDGs 14 and 15 can contribute to the achievement of other SDG priorities and targets.

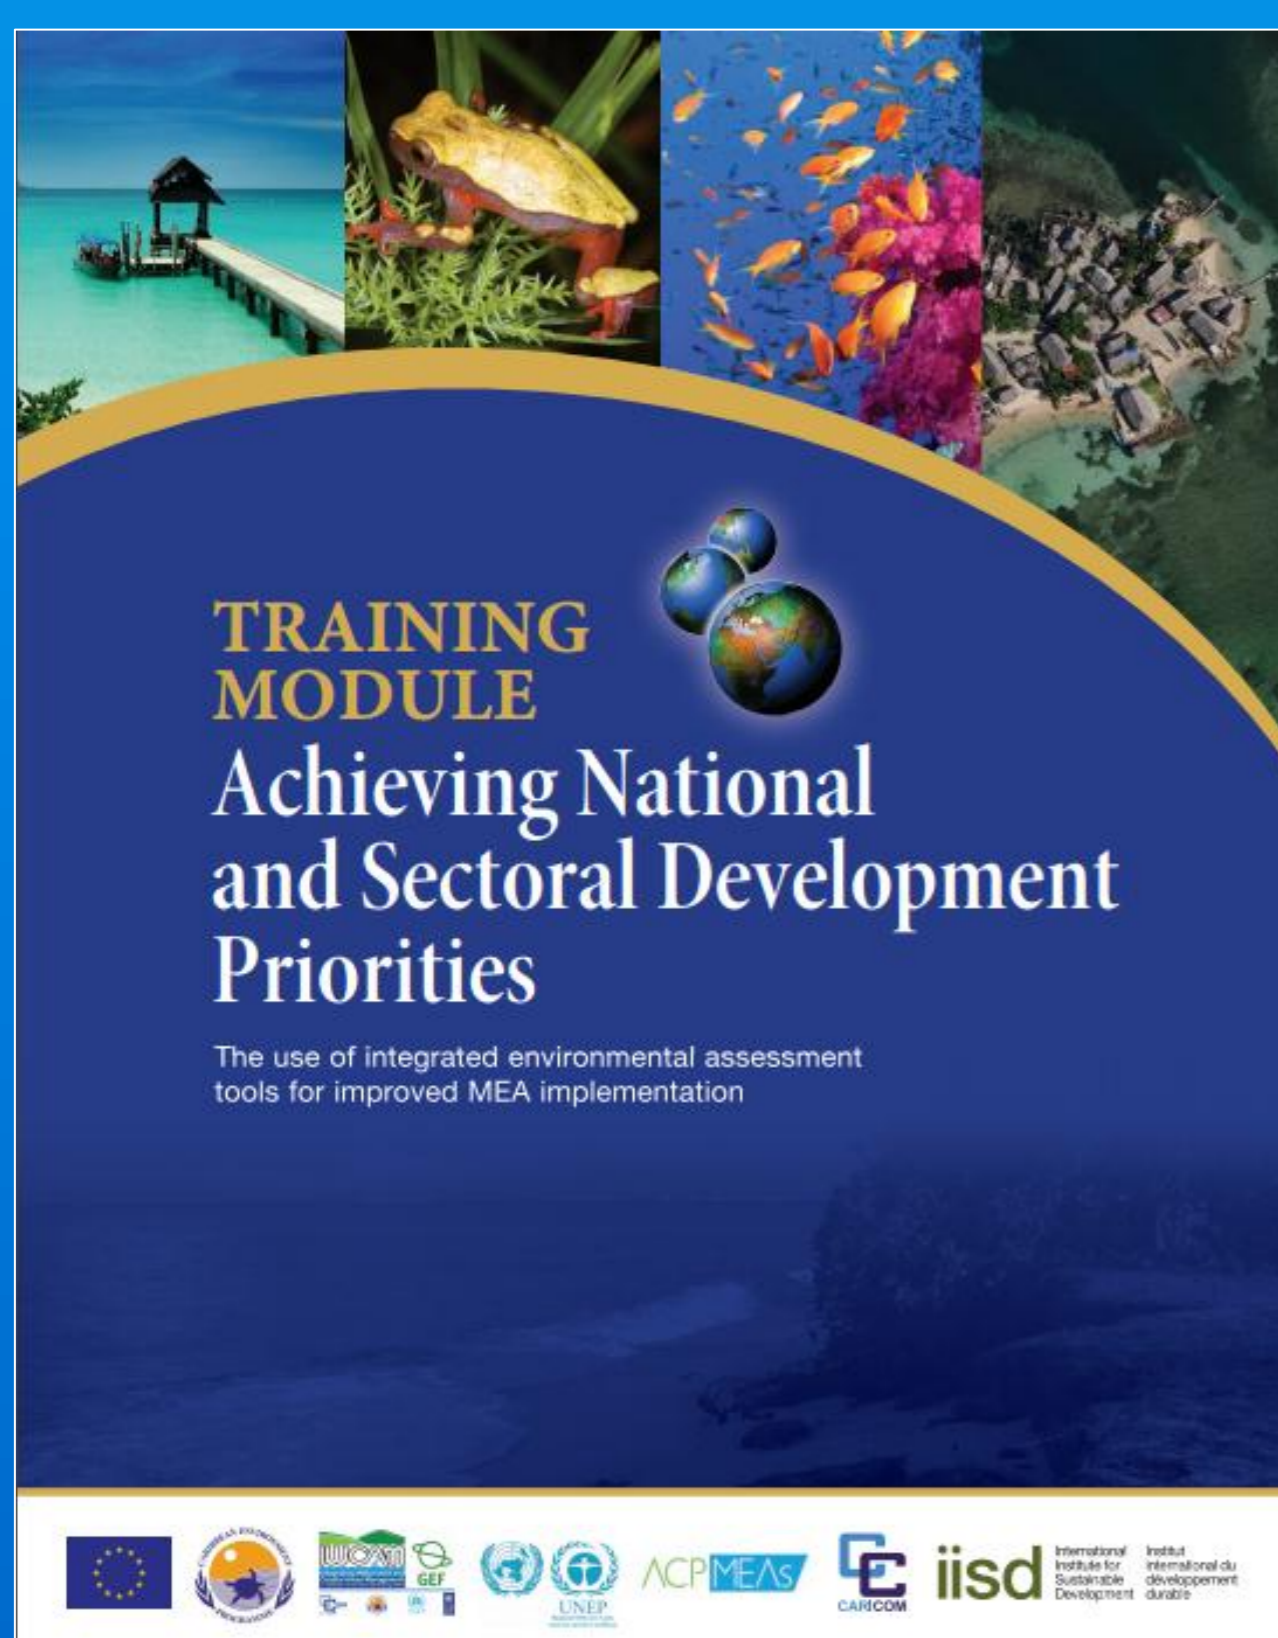

Envision the Desired Future

Using insights from the first two analyses, envision desired future biodiversity outcomes and identify associated targets and progress indicators.

Formulate Policy

Identify a portfolio of policies to achieve the desired outcomes. Use a mix of policy responses to address drivers, pressures, states/trends and impacts.

This approach is taken from *the Training Module: Achieving National and Sectoral Development Priorities*, published by the CARICOM Secretariat and the International Institute for Sustainable Development.
