Current Status
The elderly Population

As of 2015, the population aged 65 is 6.57 million, and its portion is 13.2% of the total population.

The United Nations defined that an aging society is when the population over 65 is over 7% of the total population. Therefore, we can say that our country has entered into an aging society.
The elderly Poverty

- This indicator represents the proportion of the elderly who earn cost of living less than 50% of the income of the middle class among the elderly over the age of 65.
- As the graph shows, Korea is the No.1 among the OECD countries.
Of the total elderly households, 32.9% are households living alone, and 34.0% are just one generational household. This shows that there are a lot of households living alone or staying away from their children and living only with the couple.
The elderly happiness index

- The happiness index of over 60 was measured the lowest in all ages.
In Korea, the suicide rate in over 60 has high portion in all age groups.
Core Problem

Therefore, Korea already has entered an aging society but Korea society has not respond properly, so now Korean society is suffering poverty and suicide of the elderly people.
Cause of These Phenomena
Since the traditional Korean old people support system has collapsed due to increasing individualism of the Korean society, we can observe chaos and difficulty in situation that has no new old people support system.
Cause of These Phenomena: Negative perception about The elderly

- The elderly are stubborn.
- The elderly are useless.
- The elderly can’t work properly.
- The elderly are sick.
