Green Economy in the Context of Sustainable Development and Poverty Eradication

Dr. Xin Zhou
Research Leader
Strategic and Quantitative Analysis Centre (QAC), IGES

Green and equal transition towards sustainable development
The SDGs with 17 Goals and 169 Targets forms an integrated framework leading the way ahead for delivering sustainability by 2030.
A green economy is one that results in improved human well-being and poverty eradication, while significantly reducing environmental damages and ecological scarcities. In a green economy, growth in industry, income and employment is driven by green investment that reduce carbon emissions and pollution, enhance energy and resource efficiency and prevent the loss of biodiversity and ecosystem services.
Importance of understanding SDG interlinkages for breaking the silos and for SDG integration

- 17 SDGs and 169 targets inherently connect with each other forming an indivisible network of interlinkages from a systemic perspective.
- SDG integration has been highly recognised throughout the negotiation process of SDGs formation as well as in the planning and reporting processes (VNRs).
- Understanding the interlinkages within and between SDGs is important for SDG integration to address critical issues such as:
  - How will achieving one target impact on achieving other targets?
  - How strong are the impacts?
  - Where are the areas of SDG synergies or trade-offs?
  - How countries are different in terms of SDG interlinkages, etc.
IGES developed a practical tool on SDG interlinkages analysis and visualisation

**Identification of the interlinkages**
- Identification of the interlinkages between SDG targets based on:
  - Knowledge obtained from international consultation processes on SDG indicators; and
  - Literature review.

**Indicators and data collection**
- Identification of the indicators for SDG targets with trackable data;
- Collection of time series data (2001-2014) for the indicators for nine Asian countries.

**Quantification of the interlinkages**
- Statistical treatment of data;
- Quantification of the interlinkages between SDG targets based on the correlation analysis of the corresponding indicators using time-series data.

**Analysis and visualisation of the interlinkages**
- Creation of a quantified network of the interlinkages between SDG targets for each country;
- Use of the Social Network Analysis to analyse the structure of the interlinkages and identify strategic targets based on the measurements of centrality;
- Development of a web tool to view the indicator-level data and visualise the interlinkages between SDG targets.
IGES SDG Interlinkages and Data Visualisation Web Tool Version 1.0 (free access at https://sdginterlinkages.iges.jp/)

For example, here we selected Japan, Goal 13 on climate action and Target 13.2 on integrating climate change measures into national policies. Target 13.2 has potential synergies with many targets of Goal 7 (energy) and other targets under Goal 13 but possible trade-offs with some targets of Goal 8 (jobs and growth), Goal 9 (Industry and infrastructure) and Goal 6 (water and sanitation).

Existing performance by SDGs in JPN, PHL and KHM

Source: SDG Index and Dashboards. SDSN report, 2016.
What we face now: Major synergies and trade-offs in the enviro-economic links in Japan

- **Synergies**: More synergies between environmental goals (Goals 12, 13, 14, 15) and Goals 6, 7, 8, 9 and 11. In particular, Goals 14 and 15 will have more synergies with other economic Goals than Goals 12 and 13.

- **Trade-offs**: Environmental dimensions have more conflicts with Target 2.3 (Goals 12, 14) and Target 2.4 (Goals 14, 15). In particular, there are potential conflicts between Targets 13.1 and 13.2 and Goal 6, between Target 12.5 and Goal 9 and between Target 12.4 and Goal 2.

- **Strengthening Goals 14 and 15** can be set as the leverage points and addressing Goals 12 and 13 and the linkages with Goals 2, 6 and 9 can be the priorities.
What we face now: Major synergies and trade-offs in the enviro-economic links in the Philippines

- **Synergies:** More synergies between environmental goals and Goals 6, 7 and 8. Similarly to the case of Japan, Goals 14 and 15 will have more synergies with other economic Goals than Goals 12 and 13.

- **Trade-offs:** Environmental dimensions have more conflicts, in particular, between Goal 12 and Target 13.1 with Goals 9, 11 and Target 8.2.

- **Strengthening Goals 14 and 15** can be set as the leverage points to enabling gains in many other areas and addressing Goals 12 and Target 13.1 and the linkages with Goals 9, 11 and Target 8.2 can be the priorities for joint implementation.
What we face now: Major synergies and trade-offs in the enviro-economic links in Cambodia

- **Synergies:** More synergies between environmental goals and Goals 7 and 8. Goals 14 will have more synergies with other economic Goals than Goals 12, 13 and 15.

- **Trade-offs:** Environmental dimensions have more conflicts, in particular between Goal 12 and Goal 9 and between Goal 13 and Goal 6.

- **Strengthening Goals 14** can be set as the leverage points for enabling gains in many other areas and addressing Goals 12 and the linkages with Goal 9 and Goals 13 and the linkages with Goals 6 can be the priorities for joint implementation to avoid trade-offs.
What we are now: Major synergies and trade-offs in the enviro-social links in Japan

- **Synergies:** More synergies between environmental goals and Goal 3. In particular Goals 12 and 15 have more synergies with other social Goals than Goals 13 and 14.

- **Trade-offs:** Environmental dimensions have more conflicts with Goals 4 and 5, in particular between Target 13.3 and Goal 4, between Target 13.3.b and Goal 5 and between Goal 14 and Goal 16.

- **Strengthening Goals 12 and 15** can be set as the leverage points and addressing Goal 13 and the linkages with Goals 4 and 5 and between Goal 14 and 16 can be the priorities.
What we are now: Major synergies and trade-offs in the enviro-social links in the Philippines

- **Synergies:** More synergies between environmental goals and Goals 3 and 4 and some Targets of Goal 5. In particular Goals 13 and 15 have more synergies with other social Goals than Goals 12 and 14.

- **Trade-offs:** Environmental dimensions in particular 13.b have some conflicts with some targets of Goal 5, Target 12.4 have some conflicts with some health targets of Goal 3 and Goals 12 and 14 with Target 1.5.

- **Strengthening Goals 13 and 15** can be set as the leverage points and addressing Goal 13 and the linkages with Goal 5, between Goal 12 and 3 and Goals 12 and 14 with Target 1.5 can be the priorities.
What we face now: Major synergies and trade-offs in the enviro-social links in the Cambodia

- **Synergies:** Environmental goals have more synergies with social goals in Cambodia than in JPN and PHL. Goals 13, 14 and 15 have more synergies with other social Goals than Goal 12.

- **Trade-offs:** Goal 12 have some conflicts with some health targets of Goal 3 and Goals 12 and 14 have some conflicts with Target 1.5.

- Achieving environmental goals will enable many gains in the social development. Addressing Goal 12 and the linkages with Goal 3, and between Goals 12, 14 and Target 1.5 can be the priorities for joint implementation.
The way forward: SDG integration at different stages of the policy cycle

Planning: Priority setting, SEA, SA

Institution: Which gov. organizations should be involved

Financing: Efficient resource allocation based on the synergies and trade-offs

Monitoring: Effective and trackable data and headline indicators
Thank you!
