

## Invitation for Comments on the Proposed Results Framework on Sustainable, Low Carbon Transport

To promote the integration of sustainable transport in global policies on sustainable development, the Partnership on Sustainable, Low Carbon Transport (SLoCaT) started the development of a Results Framework on Sustainable, Low Carbon Transport in October 2013. It is intended that this Results Framework will result in:

- a) An agreed common set of targets and indicators, defining sustainable, low carbon transport by 2030; this to guide the transport and development community in the development of transport infrastructure and services in support of economic and social development;
- b) The integration of sustainable, low carbon transport in the Sustainable Development Goals and Targets as being developed by the Open Working Group (OWG) on SDGs.

The proposed Results Framework calls for targets to improve rural, urban and national access as well as regional connectivity in combination with targets to reduce road crashes, air pollution and greenhouse gas emissions. The Results Framework was developed in consultation with over 30 organizations and was discussed in various stakeholder consultation events. A first formal round of stakeholder consultations was conducted in December 2013. Comments received were integrated in the current draft of the proposed Results Framework.

We are now soliciting comments on the proposed Results Framework. In your comments we would like you to address the following questions:

- 1) Are any major social, economic or environmental issues not covered, or not covered sufficiently, in the Results Framework on Sustainable Transport?
- 2) Does the Results Framework sufficiently recognise the special mobility needs of vulnerable, poor or otherwise disadvantaged population groups and transport system users?
- 3) Are the proposed targets and indicators measurable in terms of the monitoring and evaluation approaches outlined in the Results Framework and its Appendix on measurability?

In order to help us further improve the Results Framework, and to make your feedback relevant, please keep in mind the following:

- The structure of the Results Framework and its targets is the outcome of detailed discussions. Proposed changes in the wording of the targets may be considered, if well-reasoned and aligned with the overall structure of the results framework.
- Please carefully read the existing document before proposing any additions to the number of indicators, implementation and enabling measures. In order to provide a practical framework the number of indicators must be limited and duplications must be avoided.
- Methodologies for measuring the proposed indicators and targets are generally available and well-proven. While some indicators and targets are already measured today, others require further efforts to improve data quality on the global level and/or in particular countries, regions and cities. Implications for currently available methodologies, measurement and monitoring systems have been outlined in the document.

We look forward to your comments, please send them to [Talya.Enriquezromano@slocatpartnership.org](mailto:Talya.Enriquezromano@slocatpartnership.org) latest by July 1.

All comments received will be integrated in a comments matrix and published on [www.slocat.net/resultsframework](http://www.slocat.net/resultsframework).
